Acetone	U5.0	B13	n/a

(a) Only parameters that are detected are listed in the table. The sampling and analysis plan contains a complete list of analyses performed.

(b) Prefix "J" indicates the value was estimated at or below the analytical detection limit by the laboratory; "BJ" indicates that the analyte was detected in the associated lab blank and that the value was estimated at or below the anlytical detection limit by the laboratory; "U" indicates that the analyte was not detected; "<" indicates that the compound was not detected at the reported value; and "E" indicates that the percent difference between the parent sample and its serial dilution's concentration exceeds 10%.

(c) If a reference limit exists, the source is coded as:

1 Rules of Tennessee Department of Environment and Conservation, Division of Water Pollution Control, Chapter 1200-4-3, General Water Quality Criteria, Domestic Water Supply, as amended.

2 40 CFR Part 141--National Primary Drinking Water Regulations, Subparts B and G, as amended.

3 40 CFR Part 143--National Secondary Drinking Water Regulations, as amended.

4 DOE Order 5400.5, Chapter III, Derived Concentration Guides for Air and Water.

*(d) Individual radionuclide concentrations significantly greater than zero are identified by an *. Detected radionuclides are those detected at or above MDA.*

(e) Dry season sampling not performed because the location was dry at the time of sampling.

(a) All values were included in the calculations. Only parameters that have detections in one or more samples are listed in the table. The sampling and analysis plan contains a complete list of analyses performed.
(b) Prefix "U" indicates that the value was undetected at the analytical detection limit or MDA; "E" indicates that the percent difference between the parent sample and its serial dilution's concentration exceeds 10%; and "<" indicates the value for a parameter was not quantifiable at the analytical detection limit.
(c) A tilde (~) indicates that estimated values and/or detection limits were used in the calculation.
(d) Standard error of the mean.
(e) Tennessee General Water Quality Criteria for Freshwater Fish and Aquatic Life, as amended (MEK 0.2, WCK 1.0, WCK 2.6, WCK 6.8). 4% of DOE DCG used for radionuclides, where applicable.
*(f) Individual and average radionuclide concentrations significantly greater than zero are identified by an *. Detected radionuclides are those detected at or above MDA.*

(a) Only parameters that were detected for at least one species are listed in the table. The sampling and analysis plan contains a complete list of analyses performed.
(b) Prefix "<" indicates the value for a parameter was not quantifiable at the analytical detection limit and "U" indicates that the value was undetected at the analytical detection limit or MDA.
(c) Radionuclide concentrations significantly greater than zero are identified by an *. Detected radionuclides are those detected at or above MDA.

(a) All values were included in the calculations. Only parameters that have detections in one or more samples are listed in the table. The sampling and analysis plan contains a complete list of analyses performed.
(b) Prefix "J" indicates the value was estimated at or below the analytical detection limit by the laboratory; "U" indicates that the value was undetected at the analytical detection limit or MDA; "E" indicates that the percent difference between the parent sample and its serial dilution's concentration exceeds 10%; "BJ" indicates the value was estimated at or below the analytical detection limit and the parameter was detected in the lab blank, and "<" indicates the value for a parameter was not quantifiable at the analytical detection limit.
(c) A tilde (~) indicates that estimated values and/or detection limits were used in the calculation.
(d) Standard error of the mean.
(e) Tennessee General Water Quality Criteria for Recreation and Domestic Use, as amended (CRK 16, CRK 23, CRK 32, CRK 58, and CRK66). 4% of DOE DCG used for radionuclides, where applicable.
(f) Individual and average radionuclide concentrations significantly greater than zero are identified by an *. Detected radionuclides are those detected at or above MDA.

Footnote Definitions

[d] Dilution is due to sample matrix.
[e] Results should be considered estimated
[J] Estimated value.
[k] Sample concentration is greater than 4 times the spike level for this sample batch.
[w] Not a recommended analyte by the preparation method used.
[z] Analyte reported, but not required or requested; use for qualitative purposes only.

Qualifier Definitions

D - Compounds identified in an analysis at a secondary dilution factor
E - Result estimated due to interferences
J - Indicates an estimated value (VOA)
J - Chemical tracer recovery is less than 50% or exceeds 125% (RAD)
N - Sample spike recovery not within control limits
X - Confirmation of GC pesticide results attempted by GC/MS but failed
z - Analyte reported, but not required or requested; use for qualitative purposes only
