Center for Transportation Analysis
Engineering Science & Technology Division

**TRANSPORTATION ENERGY DATA BOOK:
EDITION 22**

Stacy C. Davis
Susan W. Diegel
Oak Ridge National Laboratory

September 2002

Prepared for the
Office of Planning, Budget Formulation and Analysis
Energy Efficiency and Renewable Energy
U.S. Department of Energy

Prepared by the
Oak Ridge National Laboratory
Oak Ridge, Tennessee 37831-6073
Managed by
UT-BATTELLE, LLC
for the
U.S. DEPARTMENT OF ENERGY
under Contract No. DE-AC05-00OR22725

DOCUMENT AVAILABILITY

Reports produced after January 1, 1996, are generally available free via the U.S. Department of Energy (DOE) Information Bridge:

Web site: <http://www.osti.gov/bridge>

Reports produced before January 1, 1996, may be purchased by members of the public from the following source:

National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
Telephone: 703-605-6000 (1-800-553-6847)
TDD: 703-487-4639
Fax: 703-605-6900
E-mail: info@ntis.fedworld.gov
Web site: <http://www.ntis.gov/support/ordernowabout.htm>

Reports are available to DOE employees, DOE contractors, Energy Technology Data Exchange (ETDE) representatives, and International Nuclear Information System (INIS) representatives from the following source:

Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831
Telephone: 865-576-8401
Fax: 865-576-5728
E-mail: reports@adonis.osti.gov
Web site: <http://www.osti.gov/contact.html>

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

Users of the *Transportation Energy Data Book* are encouraged to comment on errors, omissions, emphases, and organization of this report to one of the persons listed below. Requests for additional complementary copies of this report, additional data, or information on an existing table should be referred to Ms. Stacy Davis, Oak Ridge National Laboratory.

FOREWORD

Welcome to this 22nd edition of the Transportation Energy Data Book. I would like to bring to your attention some of the data that is new or of particular interest:

1. Transportation's share of U.S. oil use is at an all-time high of 67.3% (Table 1.12)
2. Transportation's share of U.S. energy use is at an all-time high of 27.9% (Table 2.1)
3. Between 1990 and 2000, light truck energy use grew at a faster rate than for any other mode (Tables 2.6 and 2.7)
4. The price of a new imported car exceeded the price of a new domestic car for the first time in 1982 and is now about 40% higher (Table 5.11)
5. Cars that are 15 years old and older make up 15% of the car population today whereas they made up about 3% of the car population thirty years ago (Table 6.6)
6. Estimated statistics for Class 2b trucks (those between 8,500 and 10,000 pounds gross vehicle weight) show them to use about 30% as much fuel as Class 2a trucks and about 15% as much fuel as Class 1 trucks (Table 7.3) and their percent of light truck sales is not growing (Table 7.4)
7. The optimal speed to attain the best fuel economy has changed over time. In vehicles tested in 1973, the highest mpg was attained at speeds between 30 and 40 mph. In the vehicles tested in 1997, the highest mpg was attained at speeds between 50 and 55 mph (Table 7.24)
8. Annual bicycle sales tend to be greater than light vehicle sales in the U.S. (Table 11.16)

I hope you find value in this data book. We welcome suggestions on how to improve it.

ACKNOWLEDGMENTS

The authors would like to express their gratitude to the many individuals who assisted in the preparation of this document. First, we would like to thank Phil Patterson and the Energy Efficiency and Renewable Energy staff for their continued support of the Transportation Energy Data Book project. We would also like to thank Patricia Hu of Oak Ridge National Laboratory (ORNL) for her guidance and mentoring. This document benefits from the criticism and careful review of Phil Patterson, OTT; Elyse Steiner, National Renewable Energy Laboratory; James Moore and William Shadis, TA-Engineering, Inc.; and Margaret Singh, Argonne National Laboratory. We would also like to thank Jamie Payne, ORNL, who designed the cover; Sherry Campbell Gambrell, ORNL, who prepared the title index; and Bob Boundy, Q Systems, who assisted with so many tasks we can't name them all. Finally, this book would not have been possible without the dedication of Debbie Bain, who masterfully prepared the manuscript.

ABSTRACT

The *Transportation Energy Data Book: Edition 22* is a statistical compendium prepared and published by Oak Ridge National Laboratory (ORNL) under contract with the Office of Planning, Budget Formulation, and Analysis, under the Energy Efficiency and Renewable Energy (EERE) program in the Department of Energy (DOE). Designed for use as a desk-top reference, the data book represents an assembly and display of statistics and information that characterize transportation activity, and presents data on other factors that influence transportation energy use. The purpose of this document is to present relevant statistical data in the form of tables and graphs. The latest editions of the Data Book are available to a larger audience via the Internet (www-cta.ornl.gov/data).

This edition of the Data Book has 12 chapters which focus on various aspects of the transportation industry. Chapter 1 focuses on petroleum; Chapter 2 – energy; Chapter 3 – greenhouse gas emissions; Chapter 4 – criteria pollutant emissions; Chapter 5 – transportation and the economy; Chapter 6 – highway vehicles; Chapter 7 – light vehicles; Chapter 8 – heavy vehicles; Chapter 9 – alternative fuel vehicles; Chapter 10 – fleet vehicles; Chapter 11 – household vehicles; and Chapter 12 – nonhighway modes. The sources used represent the latest available data. There are also three appendices which include detailed source information for some tables, measures of conversion, and the definition of Census divisions and regions. A glossary of terms and a title index are also included for the readers convenience.

INTRODUCTION

In January 1976, the Transportation Energy Conservation (TEC) Division of the Energy Research and Development Administration contracted with Oak Ridge National Laboratory (ORNL) to prepare a Transportation Energy Conservation Data Book to be used by TEC staff in their evaluation of current and proposed conservation strategies. The major purposes of the data book were to draw together, under one cover, transportation data from diverse sources, to resolve data conflicts and inconsistencies, and to produce a comprehensive document. The first edition of the TEC Data Book was published in October 1976. With the passage of the Department of Energy (DOE) Organization Act, the work being conducted by the former Transportation Energy Conservation Division fell under the purview of the DOE's Office of Transportation Programs, then to the Office of Transportation Technologies. DOE, through the Office of Transportation Technologies, has supported the compilation of Editions 3 through 21. In the most recent DOE organization, Edition 22 falls under the purview of the Office of Planning, Budget Formulation, and Analysis in the Office of Energy Efficiency and Renewable Energy.

Policymakers and analysts need to be well-informed about activity in the transportation sector. The organization and scope of the data book reflect the need for different kinds of information. For this reason, Edition 22 updates much of the same type of data that is found in previous editions.

In any attempt to compile a comprehensive set of statistics on transportation activity, numerous instances of inadequacies and inaccuracies in the basic data are encountered. Where such problems occur, estimates are developed by ORNL. To minimize the misuse of these statistics, an appendix (Appendix A) is included to document the estimation procedures. The attempt is to provide sufficient information for the conscientious user to evaluate the estimates and to form their own opinions as to their utility. Clearly, the accuracy of the estimates cannot exceed the accuracy of the primary data, an accuracy which in most instances is unknown. In cases where data accuracy is known or substantial errors are strongly suspected in the data, the reader is alerted. In all cases it should be recognized that the estimates are not precise.

The majority of the statistics contained in the data book are taken directly from published sources, although these data may be reformatted for presentation by ORNL. Consequently, neither ORNL nor DOE endorses the validity of these data.

In this document, petroleum is defined as crude oil (including lease condensate) and natural gas plant liquids.

Although the world has consumed about 40% of estimated conventional oil resources, the total fossil fuel potential is huge. Methane hydrates—a potential source of natural gas—are included in the “additional occurrences” of unconventional natural gas, and constitute the largest resource.

^a Data are not available

In 2001, OPEC accounted for 42% of world oil production. Responding to low oil prices in early 2000, Mexico, Norway, Russia, and Oman joined OPEC in cutting production. This group of oil countries, referred to here as OPEC+, account for more than 62% of world oil production.

Production – Energy Information Administration, *International Petroleum Monthly*, April 2002, Tables 4.1a – 4.1c and 4.3

Consumption – Energy Information Administration, *International Petroleum Monthly*, April 2002, Table 4.6.

OPEC consumption (2000 data) – Energy Information Administration, *International Energy Annual 2000*, Table 1.2.

Note:

Total consumption is higher than total production due to refinery gains including alcohol and liquid products produced from coal and other sources.

OPEC countries include Venezuela, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, United Arab Emirates, Algeria, Libya, Nigeria, and Indonesia.

OPEC consumption data are for 2000.

Total OECD government-owned petroleum stocks were slightly lower in 2001 than in 1995. The amount of petroleum held in government stocks is less than one-third that of commercial stocks.

This chart shows the volatility of crude oil prices since 1870. Given this volatility, it is difficult for anyone to predict future crude oil prices with any certainty.

Figure 1.3. Crude Oil Prices in Current and Constant Terms, 1870–2000

1973–2001 Crude oil prices – U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, April 2002, DOE/EIA-0035(2002/04), Table 9.1, domestic first purchase price.

The share of petroleum imported to the U.S. can be calculated using total imports or net imports. Net imports, which is the preferred data, rose to 50% of U.S. petroleum consumption for the first time in 1998, while total imports reached 50% for the first time in 1993. OPEC share of net imports has been around 50% for the last five years.

The Costs of Oil Dependence

In the *Costs of Oil Dependence: A 2000 Update*, authors Greene and Tishchishyna indicate that the oil market upheavals caused by the OPEC cartel over the last 30 years have cost the U.S. in the vicinity of \$7 trillion (present value 1998 dollars) in total economic costs, which is about as large as the sum total of payment on the national debt over the same period.

Oil dependence is the product of (1) a noncompetitive world oil market strongly influenced by the OPEC cartel, (2) high levels of U.S. oil imports, (3) oil's critical role in the U.S. economy, and (4) the absence of economical and readily available substitutes for oil. Transportation is key to the problem because transportation vehicles account for 68% of U.S. oil consumption and nearly all of the high-value light products that drive the market.

Oil consuming economies incur three types of costs when monopoly power is used to raise prices above competitive market levels:

- *Loss of potential gross domestic product (GDP)* - the economy's ability to produce is reduced because a key factor of production is more expensive;
- *Macroeconomic Adjustment Costs* - sudden changes in oil prices increase unemployment, further reducing economic output; and
- *Transfer of Wealth* - some of the wealth of oil consuming states is appropriated by foreign oil producers.

Major oil price shocks have disrupted world energy markets four times in the past 30 years (1973-74, 1979-80, 1990-91, 1999-2000). Each of the first three oil price shocks was followed by an economic recession in the U.S.

^aFirst two quarters of 2001.

Estimates of 1996 military expenditures for defending oil supplies in the Middle East range from \$6 to \$60 billion per year. This wide range in estimates reflects the difficulty in assigning a precise figure to the military cost of defending the U.S. interests in the Middle East. The two main reasons for the difficulty are 1) the Department of Defense does not divide the budget into regional defense sectors and 2) it is difficult to determine how much of the cost is attributable to defending Persian Gulf oil.

Table 1.8
Summary of 1996 Military Expenditures for Defending Oil Supplies from the Middle East

Source	Original estimates (billion dollars)	Year of original estimate	1996 estimate (constant 1996 billion dollars)
General Accounting Office [1]	\$33	1990	\$28 ^a
Congressional Research Service [2]	\$6.4	1990	\$6 ^a
Greene and Leiby [3]	\$14.3	1990	\$12 ^a
Ravenal [4]	\$50	1992	\$60 ^b
Kaufmann and Steinbruner [5]	\$64.5	1990	\$55 ^b
Delucchi and Murphy ^c [6]	\$20–40	1996	\$20–40 ^b
Average estimate is \$32 billion, with a standard deviation of \$22 billion.

^aMethyl tertiary butyl ether (MTBE).

^bIncludes ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), tertiary butyl alcohol (TBA), and other aliphatic alcohols and ethers intended for motor gasoline blending.

^cFor 1987–92, includes other hydrocarbons/hydrogen/oxygenates. For 1993–on, includes other hydrocarbons/hydrogen.

^dReported in “Other hydrocarbons” category in this year.

^eData are not available.

When crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input, a processing volume gain occurs. Due to this gain, the product yield from a barrel of crude oil is more than 100%. The processing volume gain has been growing over the years.

Source:

Department of Energy, Energy Information Administration, *Petroleum Supply Annual 2001*, Vol. 1, June 2002, Table 19 and annual. (Additional resources: www.eia.doe.gov)

^a Includes aviation gasoline(0.1%), kerosene (0.5%), naphtha and other oils for petrochemical feedstock use (2.2%), special naphthas (0.3%), lubricants (1.1%), waxes (0.1%), petroleum coke (4.9%), asphalt and road oil (3.1%), still gas (4.3%), and miscellaneous products (0.4%).

^b Products sum greater than 100% due to processing gain. The processing gain for years 1978 to 1980 is assumed to be 4%.

Most of the petroleum imported by the United States is in the form of crude oil. The U.S. does export small amounts of petroleum, mainly refined petroleum products which go to Canada and Mexico.

World petroleum consumption - U.S. Department of Energy, Energy Information Administration, *International Energy Annual 2000*, May 2002, Table 1.1, and annual.

^aTotal domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.

^bData are not available.

^cAverage annual percentage change is to the latest year possible.

The transportation oil gap is the difference between the amount of petroleum the U.S. produces and the amount of petroleum used by the transportation sector. This gap has been getting wider not only due to increasing transportation demand, but also due to decreasing U.S. petroleum production.

Figure 1.6. United States Petroleum Production and Consumption, 1950–2001

Source:
See Table 1.11.

Transportation accounts for more than two-thirds of the U.S. petroleum use. The residential sector and the commercial sector data which were previously combined are now available separately.

Petroleum accounted for 40% of the world's energy use in 1999. Though petroleum is the dominant energy source for both OECD countries and non-OECD countries, the non-OECD countries rely on coal, natural gas, and hydroelectric power more than OECD countries do.

Figure 2.1. World Consumption of Primary Energy, 2000

Source:

U.S. Department of Energy, Energy Information Administration, *International Energy Annual 2000*, Washington, DC, February 2002, Table 1.8.

The Energy Information Administration revised the historical energy data series to include renewable energy in each sector. Also, the residential and commercial sector data are now separated. Total energy use was 97 quads in 2001 with transportation using 27.9%.

Table 2.1
U. S. Consumption of Total Energy by End-Use Sector, 1973–2001^a
(quadrillion Btu)

Source:

U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, March 2002, Washington, DC, Table 2.2. (Additional resources: www.eia.doe.gov)

^aElectrical energy losses have been distributed among the sectors.

The Energy Information Administration revised the historical energy data series to include renewable energy in each sector. In transportation, the alcohol fuels blended into gasoline to make gasohol are now counted under “renewables” and have been taken out of petroleum. The petroleum category, however, still contains other blending agents that are not actually petroleum, but are not broken out into a separate category.

Table 2.2
Distribution of Energy Consumption by Source, 1973 and 2001
(percentage)

Energy source	Transportation		Residential		Commercial		Industrial		Electric utilities	
	1973	2001	1973	2001	1973	2001	1973	2001	1973	2001

^a In transportation, the petroleum category contains some blending agents which are not petroleum.

^b Includes supplemental gaseous fuels. Transportation sector includes pipeline fuel and natural gas vehicle use.

^c Includes electrical system energy losses.

^d Energy generated from geothermal, wood, waste, wind, photovoltaic, and solar thermal energy sources.

Oxygenates are blended with gasoline to be used in conventional vehicles. The amount of oxygenate use dwarfs the alternative fuel use. Gasoline-equivalent gallons are used in this table to allow comparisons of different fuel types.

Table 2.3
Alternative Fuel and Oxygenate Consumption, 1992–2001

Note:

These data were released in October 1999. Please check the source web site for updates which were not available when this document went to press.

^aBased on plans or projections.

^bConsumption includes gasoline portion of the mixture.

^cVehicle consumption only; does not include power plant inputs.

^dMethyl Tertiary Butyl Ether. This category includes a very small amount of other ethers, primarily Tertiary Amyl Methyl Ether (TAME) and Ethyl Tertiary Butyl Ether (ETBE).

As data about alternative fuel use become available, an attempt is made to incorporate them into this table. Sometimes assumptions must be made in order to use the data. Please see Appendix A for a description of the methodology used to develop these data.

^a Civilian consumption only. Totals may not include all possible uses of fuels for transportation (e.g., snowmobiles).

^b This year, crude oil equivalent is not a simple conversion from Btu based on the average Btu in a barrel of oil. Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 18 for details.

^c Two-axle, four-tire trucks.

The highway sector is by far the largest part of transportation energy use. Light truck energy use has increased at the greatest rate, due to the increased use of light trucks as personal passenger vehicles. Light trucks include pick-ups, minivans, sport-utility vehicles, and vans.

Table 2.6
Highway Transportation Energy Consumption by Mode, 1970–2000^a

Gasoline: U.S. Department of Transportation, Federal Highway Administration, *Highway Statistics 2000*, Washington, DC, Table MF-24, and annual.

Diesel: U.S. Department of Energy, Energy Information Administration, *Fuel Oil and Kerosene Sales 2000*, Washington, DC, Table 1, and annual.

^a Unadjusted sales of distillate fuel oil.

The Federal Highway Administration cautions that data from 1993-on may not be directly comparable to earlier years. Some states have improved reporting procedures in recent years, and the estimation procedures were revised in 1994. Prior to the Energy Policy Act of 1992, gasohol was defined as a blend of gasoline and at least 10%, by volume, alcohol. Effective January 1, 1993, three types of gasohol were defined: 10% gasohol—containing at least 10% alcohol; 7.7% gasohol—containing 7.7% alcohol but less than 10%; and 5.7% gasohol—containing at least 5.7% alcohol but less than 7.7%. See Table 2.3 for details on oxygenate usage.

(Additional resources: www.fhwa.dot.gov)

^a Estimated for 1980–92 as 10% of gasohol consumption.

^b Consists primarily of diesel fuel, with small quantities of liquified petroleum gas.

^c Data for gasoline and gasohol cannot be separated in this year.

^d Data are not available.

The types of gasoline supplied today are significantly different than in 1981, mostly due to air quality mandates. The phase-out of leaded gasoline began in 1978 and the phase-in of reformulated gasoline began in 1995.

Note:

Reformulated gasoline has lower concentrations of certain volatile organic compounds in a formulation intended to reduce ozone-forming hydrocarbons and air toxics. It is required in the worst ozone-nonattainment areas.

Gasohol category includes all oxygenate blends except reformulated gasoline.

Unleaded gasoline is now known as conventional gasoline.

Nearly all of the fuel ethanol used in the U.S. is made domestically. One quarter of MTBE was imported in 2001.

Table 2.10
U.S. Production and Imports of MTBE^a and Fuel Ethanol, 1985–2001
(million gallons)

Year	Production		Imports	
	Fuel ethanol	MTBE ^a	Fuel ethanol	MTBE ^a

Note:

Table 2.3 displays gasoline-equivalent gallons, which differ from these gallons.

^a Methyl tertiary-butyl ether.

^b Data are not available.

Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences between the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes. These values are averages, and there is a great deal of variability even within a mode.

Global Warming Potentials (GWP) were developed to allow comparison of each greenhouse gas' ability to trap heat in the atmosphere relative to carbon dioxide. Extensive research has been performed and it has been discovered that the effects of various gases on global warming are too complex to be precisely summarized by a single number. Further understanding of the subject also causes frequent changes to estimates. Despite that, the scientific community has developed approximations, which are shown below. Most analysts use the 100-year time horizon.

Table 3.2
Numerical Estimates of Global Warming Potentials Compared With Carbon Dioxide
(kilogram of gas per kilogram of carbon dioxide)

Gas	Lifetime (years)	Global warming potential direct effect for time horizons of		
		20 years	100 years	500 years
Carbon Dioxide	5-200 ^a	1	1	1
Methane	12	62	23	7
Nitrous Oxide	114	275	296	156
HFCs ^b , PFCs ^c , and Sulfur Hexafluoride				
HFC-23	260	9,400	12,000	10,000
HFC-125	29	5,900	3,400	1,100
HFC-134a	14	3,300	1,300	400
HFC-152a	1	410	120	37
HFC-227ea	33	5,600	3,500	1,100
Perfluoromethane (CF ₄)	50,000	3,900	5,700	8,900
Perfluoroethane (C ₂ F ₆)	10,000	8,000	11,900	18,000
Sulfur hexafluoride (SF ₆)	3,200	15,100	22,200	32,400

Source:

U.S. Department of Energy, Energy Information Administration, *Emissions of Greenhouse Gases in the United States 2000*, Washington, DC, November 2001, Table 3. Original source: Intergovernmental Panel on Climate Change. (Additional resources: www.eia.doe.gov, www.ipcc.ch)

Note:

The typical uncertainty for global warming potentials is estimated by the Intergovernmental Panel on Climate Change \pm 35 percent.

^aNo single lifetime can be defined for carbon dioxide due to different rates of uptake by different removal processes.

^bHydrofluorocarbons

^cPerfluorocarbons

Carbon dioxide emissions in 2000 were 17% higher than in 1990. Carbon dioxide accounts for the majority of greenhouse gases.

Table 3.3
Estimated U.S. Emissions of Greenhouse Gases, 1990–2000

Greenhouse gas	Unit of measure ^a	1990	1995	1999	2000
Carbon dioxide	million metric tons of gas	4,969.4	5,273.5	5,630.7	5,805.5
	million metric tons of carbon	1,355.0	1,438.0	1,536.0	1,583.0
Methane	million metric tons of gas	31.7	31.1	28.7	28.2
	million metric tons of carbon (gwp) ^b	199.0	195.0	180.0	177.0
Nitrous oxide	million metric tons of gas	1.2	1.3	1.2	1.2
	million metric tons of carbon (gwp) ^b	94.0	101.0	100.0	99.0
HFCs, PFCs, and SF ₆ ^c	million metric tons of carbon (gwp) ^b	30.0	35.0	45.0	47.0

^aGases that contain carbon can be measured either in terms of the full molecular weight of the gas or just in terms of their carbon content. See Appendix B, Table B.5 for details.

^bBased on global warming potential.

^cHFC-hydrofluorocarbons. PFC-perfluorocarbons. SF₆-sulfur hexafluoride.

Gases which contain carbon can be measured in terms of the full molecular weight of the gas or just in terms of their carbon content. This table presents carbon content. The ratio of the weight of carbon to carbon dioxide is 0.2727. The transportation sector accounts for approximately one-third of carbon dioxide emissions.

^aIncludes energy from petroleum, coal, and natural gas. Electric utility emissions are distributed across consumption sectors.

Most U.S. carbon dioxide emissions come from petroleum fuels (98%). Motor gasoline has been responsible for about 60% of U.S. carbon dioxide emissions over the last twenty years.

The Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation (GREET) Model

The energy in greenhouse gas estimates of the most recent version (Beta Version 1.6) of the GREET model are displayed in the next table. The model estimates the full fuel-cycle emissions and energy use associated with various transportation fuels and advanced transportation technologies for light-duty vehicles. It calculates fuel-cycle emissions of **three greenhouse gases** (carbon dioxide, methane, and nitrous oxide) and five criteria pollutants (volatile organic compounds, carbon monoxide, nitrogen oxides, sulfur oxides, and particulate matter measuring 10 microns or less). **See Chapter 4 for the criteria pollutant data from GREET.** The model also calculates the total fuel-cycle energy consumption, fossil fuel consumption, and petroleum consumption using various transportation fuels. The fuel cycles that are included in the GREET model are:

- petroleum to conventional gasoline, reformulated gasoline, conventional diesel, reformulated diesel, liquefied petroleum gas, and electricity via residual oil;
- natural gas to compressed natural gas, liquefied natural gas, liquefied petroleum gas, methanol, Fischer-Tropsch diesel, dimethyl ether, hydrogen, and electricity;
- coal to electricity;
- uranium to electricity;
- renewable energy (hydropower, solar energy, and wind) to electricity;
- corn, woody biomass, and herbaceous biomass to ethanol;
- soybeans to biodiesel; and
- landfill gases to methanol.

For additional information about the GREET model, see *GREET 1.5 – Transportation Fuel-Cycle Model, Volume 1: Methodology, Development, Use and Results*, ANL/ESD-39, Vol. 1, August 1999, or contact:

Acronyms and Terms Used on Table 3.6

BD20	mixture of 20% biodiesel and 80% conventional diesel (by volume)
CA	California
CH ₄	methane
CIDI	compression ignition, direct injection
CIDIV	compression ignition, direct injection vehicle
CNG	compressed natural gas
CNGV	compressed natural gas vehicle
CO ₂	carbon dioxide
DME	dimethyl ether
E90	mixture of 90% ethanol and 10% gasoline (by volume)
EtOH	ethanol
EtOHV	ethanol vehicle
EV	electric vehicle
FCV	fuel-cell vehicle
FRFG	Federal reformulated gasoline
FT	Fischer-Tropsch
FTD	Fischer-Tropsch diesel
G.H ₂	gaseous hydrogen
GC	grid-connected (charge depleting)
GGE	gasoline gallon equivalent
GHGs	greenhouse gases
GI	grid-independent (charge sustaining)
GV	gasoline vehicle
HEV	hybrid electric vehicle
L.H ₂	liquid hydrogen
LS	low-sulfur
M90	mixture of 90% methanol and 10% gasoline by volume
MeOH	methanol
MeOHV	methanol vehicle
N ₂ O	nitrous oxide
NA	North American
NE	northeast
NG	natural gas
NNA	non-North American
SI	spark ignition
urban	Emissions occurring within air quality control regions in the U.S. These regions have emission controls in place in order to meet or maintain air quality standards.
US	United States

Chapter 4

Criteria Air Pollutants

Summary Statistics from Tables in this Chapter

Source			
Table 4.1	Transportation's share of U.S. emissions, 1999		
	<i>CO</i>		78.6%
	<i>NO_x</i>		53.4%
	<i>VOC</i>		43.5%
	<i>PM-10</i>		2.1%
	<i>PM-2.5</i>		7.6%
	<i>SO₂</i>		6.9%
	<i>NH₃</i>		5.4%
Table 4.12	Transportation's share of lead emissions		
	<i>1970</i>		82.3%
	<i>1999</i>		12.8%
Table 4.13	GREET model emissions	PM-10	NO _x
	<i>Gasoline baseline (grams per mile)</i>	0.047	0.256
	<i>Natural gas</i>	190.8%	-41.7%
	<i>E90: corn ethanol</i>	574.3%	151.2%
	<i>E90: cellulosic ethanol</i>	198.0%	389.0%
	<i>EV: US mix</i>	24.0%	11.6%
	<i>Fuel cell: hydrogen, central plant, natural gas</i>	-36.7%	-54.4%
	<i>Fuel cell: hydrogen, central electrolysis, renewables</i>	-44.8%	-58.8%
	<i>Fuel cell: hydrogen, station electrolysis, US mix</i>	191.2%	285.4%

Transportation accounts for the majority of carbon monoxide and nitrogen oxide emissions. Highway vehicles are responsible for the largest share of transportation emissions.

Note:

Detailed data tabulations for 2000 have not yet been released. Look for the *2000 Air Quality Trends Report* on the EPA website: <http://www.epa.gov/airtrends/reports.html>.

CO = Carbon monoxide. NO_x = Nitrogen oxides. PM-10 = Particulate matter less than 10 microns.

PM-2.5 = Particulate matter less than 2.5 microns. SO₂ = Sulfur dioxide. VOC = Volatile organic compounds.

NH₃ = Ammonia.

The transportation sector accounted for more than three-fourths of the nation's carbon monoxide (CO) emissions in 1999. Highway vehicles are by far the source of the greatest amount of CO. For details on the highway emissions of CO, see Table 4.3.

Table 4.2

Detailed data tabulations for 2000 have not yet been released. Look for the *2000 Air Quality Trends Report* on the EPA website: <http://www.epa.gov/airtrends/reports.html>.

Emission estimation methodology changes indicated by shaded areas. Transportation methodologies changed in 1970, while all others changed in 1990.

^aThe sums of subcategories may not equal total due to rounding.

^bRecreational marine vessels.

Though gasoline-powered light vehicles continue to be responsible for the majority of carbon monoxide emissions from highway vehicles, the total pollution from light vehicles in 1999 is less than half what it was in 1970. This is despite the fact that there were many more light vehicles on the road in 1999.

Historically, the transportation sector, highway vehicles in particular, has been a major source of lead emissions in the U.S. Regulatory action in 1978 required a gradual reduction of the lead content of all gasoline over a period of many years. The transportation sector accounts for only 13% of lead emissions in 1999, mainly due to off-highway fuel use.

Table 4.12

The Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation (GREET) Model

The energy and criteria pollutant estimates of the most recent version of the GREET model (Beta of Version 1.6) are displayed in the next table. The model estimates the full fuel-cycle emissions and energy use associated with various transportation fuels and advanced transportation technologies for light vehicles. It calculates fuel-cycle emissions of **five criteria pollutants** (volatile organic compounds, carbon monoxide, nitrogen oxides, sulfur oxides, and particulate matter measuring 10 microns or less) and three greenhouse gases (carbon dioxide, methane, and nitrous oxide). **See Chapter 3 for the greenhouse gas data from GREET.** The model also calculates the total fuel-cycle energy consumption, fossil fuel consumption, and petroleum consumption using various transportation fuels. The fuel cycles that are included in the GREET model are:

- petroleum to conventional gasoline, reformulated gasoline, conventional diesel, reformulated diesel, liquefied petroleum gas, and electricity via residual oil;
- natural gas to compressed natural gas, liquefied natural gas, liquefied petroleum gas, methanol, Fischer-Tropsch diesel, dimethyl ether, hydrogen, and electricity;
- coal to electricity;
- uranium to electricity;
- renewable energy (hydropower, solar energy, and wind) to electricity;
- corn, woody biomass, and herbaceous biomass to ethanol;
- soybeans to biodiesel; and
- landfill gases to methanol.

For additional information about the GREET model, see *GREET 1.5 – Transportation Fuel-Cycle Model, Volume 1: Methodology, Development, Use and Results*, ANL/ESD-39, Vol. 1, August 1999, or contact:

Acronyms and Terms Used on Table 4.13

BD20	mixture of 20% biodiesel and 80% conventional diesel (by volume)
CA	California
CH ₄	methane
CIDI	compression ignition, direct injection
CIDIV	compression ignition, direct injection vehicle
CNG	compressed natural gas
CNGV	compressed natural gas vehicle
CO ₂	carbon dioxide
DME	dimethyl ether
E90	mixture of 90% ethanol and 10% gasoline (by volume)
EtOH	ethanol
EtOHV	ethanol vehicle
EV	electric vehicle
FCV	fuel-cell vehicle
FRFG	Federal reformulated gasoline
FT	Fischer-Tropsch
FTD	Fischer-Tropsch diesel
G.H ₂	gaseous hydrogen
GC	grid-connected (charge depleting)
GGE	gasoline gallon equivalent
GHGs	greenhouse gases
GI	grid-independent (charge sustaining)
GV	gasoline vehicle
HEV	hybrid electric vehicle
L.H ₂	liquid hydrogen
LS	low-sulfur
M90	mixture of 90% methanol and 10% gasoline by volume
MeOH	methanol
MeOHV	methanol vehicle
N ₂ O	nitrous oxide
NA	North American
NE	northeast
NG	natural gas
NNA	non-North American
SI	spark ignition
urban	Emissions occurring within air quality control regions in the U.S. These regions have emission controls in place in order to meet or maintain air quality standards.
US	United States

Acronyms Used on Tables 4.14 and 4.15

CO	Carbon monoxide
GVW	Gross vehicle weight
HC	Hydrocarbons
HCHO	Formaldehyde
LDT	Light-duty truck
LEV	Low-emission vehicle
LVW	Loaded vehicle weight
MDPV	Medium-duty passenger vehicle (8,500–10,000 lbs. GVWR)
NMOG	Non-methane organic gases
NOx	Nitrogen oxides
PC	Passenger car
PM	Particulate matter
SULEV	Super-ultra-low-emission vehicle
ULEV	Ultra-low-emission vehicle
ZEV	Zero-emission vehicle

^aSome temporary standards are not shown.

^bBin expires after 2008.

^cNo standard.

U.S.: *Federal Register*, Vol. 65, No. 28, Thursday, February 10, 2000, pp. 6822–6870.

California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles, as of December 1, 1999 (adopted August 5, 1999), incorporated by reference in section 1961(d), title 13, CCR.

Note:

See acronym list on previous page.

^a Includes medium-duty passenger vehicles which are also required to meet bin standards.

^b A LEV Option 1 with higher NOx levels also exists for up to 4% of LDTs above 3,750 lbs.

^c Only apply to PCs and LDTs 0-3750 lbs LVW.

40 CFR 86.085-2; 40 CFR 86.090-2; 40 CFR 86.090-8; 40 CFR 86.094-8; 40 CFR 86.096-2; 40 CFR 86.096-8; 40 CFR 86.098-8; 40 CFR 86.099-8; 40 CFR 86.082-2; 40 CFR 86.000-8.
 Lisa Snapp, Office of Air and Radiation, Environmental Protection Agency, Personal communication, April 1999.

^aThe test procedure for measuring exhaust emissions has changed several times over the course of vehicle emissions regulation. The 7-mode procedure was used through model year 1971 and was replaced by the CVS-72 procedure beginning in model year 1972. The CVS-75 became the test procedure as of model year 1975. While it may appear that the total hydrocarbon and carbon monoxide standards were relaxed in 1972-74, these standards were actually more stringent due to the more stringent nature of the CVS-72 test procedure. Additional standards for carbon monoxide and composite standards for non-methane hydrocarbons and nitrogen oxides tested over the new Supplemental Federal Test Procedure will be phased-in during model years 2000-02; these standards are not shown in this table.

^bAll emission standards must be met for a useful life of 5 years/50,000 miles. Beginning in with model year 1994, a second set of emission standards must also be met for a full useful life of 10 years/100,000 miles (these standards are shown in parentheses). Tier 1 exhaust standards were phased-in during 1994-96 at a rate of 40, 80, and 100 percent, respectively.

^cIn 1968-69, exhaust emission standards were issued in parts per million (ppm) rather than grams per mile and are, therefore, incompatible with this table.

^dNo estimate available.

^eNo standard set.

^fThe cold CO emission standard is measured at 20 degrees F (rather than 75 degrees F) and is applicable for a 5-year/50,000-mile useful life.

Lisa Snapp, Office of Air and Radiation, Environmental Protection Agency, Personal communication.

^aLight truck categories LDT1-LDT4 were not actually created until 1994. From 1968 to 1978 all trucks with a Gross Vehicle Weight Rating (GVWR) up to 6,000 lbs were classified as light trucks and were required to meet the same standards. As of 1979, the maximum weight was raised to 8,500 lbs GVWR. During 1988 through 1993, light trucks were divided into two subcategories that coincide with the current LDT1 and LDT2/3/4 categories.

^bThe test procedure for measuring exhaust emissions has changed several times over the course of vehicle emissions regulation. The 7-mode procedure was used through model year 1971 and was replaced by the CVS-72 procedure beginning in model year 1972. The CVS-75 became the test procedure as of model year 1975. While it may appear that the total hydrocarbon and carbon monoxide standards were relaxed in 1972-74, these standards were actually more stringent due to the more stringent nature of the CVS-72 test procedure. Additional standards for carbon monoxide and composite standards for non-methane hydrocarbons and nitrogen oxides tested over the new Supplemental Federal Test Procedure will be phased-in during model years 2000-02; these standards are not shown in this table.

^cEmission standards had to be met for a useful life of 5 years/50,000 miles through model year 1983, and a full useful life of 11 years/120,000 miles was defined for 1985-93 (several useful life options were available for 1984). Beginning in model year 1994, emission standards were established for an intermediate useful life of 5 years/50,000 miles as well as a full useful life of 11 years/120,000 miles (these standards are shown in parentheses). Hydrocarbon standards, however, were established only for full useful life. Tier 1 exhaust standards, except PM standards, were phased-in during 1994-96 at a rate of 40, 80, and 100 percent, respectively. PM standards were phased-in at a rate of 40, 80, and 100 percent during 1995-97.

^dIn 1968-69, exhaust emission standards were issued in parts per million (ppm) rather than grams per mile and are, therefore, incompatible with this table.

^eNo estimate available.

^fNo standard set.

^gThe cold CO emission standard is measured at 20 degrees F (rather than 75 degrees F) and is applicable for a 5-year/50,000-mile useful life.

^hGross vehicle weight rating (GVWR) is the maximum design loaded weight. Loaded vehicle weight (LVW) is the curb weight (nominal vehicle weight) plus 300 lbs.

40 CFR 86.082-2; 40 CFR 86.085-2; 40 CFR 86.090-2; 40 CFR 86.090-9; 40 CFR 86.091-9; 40 CFR 86.094-9; 40 CFR 86.096-2; 40 CFR 86.096-9; 40 CFR 86.099-9; 40 CFR 86.000-9; 40 CFR 86.001-9; 40 CFR 86.004-9. Lisa Snapp, Office of Air and Radiation, Environmental Protection Agency, Personal communication, April 1999.

^aLight truck categories LDT1-LDT4 were not actually created until 1994. From 1968 to 1978 all trucks with a Gross Vehicle Weight Rating (GVWR) up to 6,000 lbs were classified as light trucks and were required to meet the same standards. As of 1979, the maximum weight was raised to 8,500 lbs GVWR. During 1988-93, light trucks were divided into two subcategories that coincide with the current LDT1 and LDT2/3/4 categories.

^bThe test procedure for measuring exhaust emissions has changed several times over the course of vehicle emissions regulation. The 7-mode procedure was used through model year 1971 and was replaced by the CVS-72 procedure beginning in model year 1972. The CVS-75 became the test procedure as of model year 1975. While it may appear that the total hydrocarbon and carbon monoxide standards were relaxed in 1972-74, these standards were actually more stringent due to the more stringent nature of the CVS-72 test procedure. Additional standards for carbon monoxide and composite standards for non-methane hydrocarbons and nitrogen oxides tested over the new Supplemental Federal Test Procedure will be phased-in during model years 2000-02; these standards are not shown in this table.

^cEmission standards had to be met for a useful life of 5 years/50,000 miles through model year 1983, and a full useful life of 11 years/120,000 miles was defined for 1985-93 (several useful life options were available for 1984). Beginning in model year 1994, emission standards were established for an intermediate useful life of 5 years/50,000 miles as well as a full useful life of 11 years/120,000 miles (these standards are shown in parentheses). Hydrocarbon standards, however, were established only for full useful life. Tier 1 exhaust standards, except PM standards, were phased-in during 1994-96 at a rate of 40, 80, and 100 percent, respectively. PM standards were phased-in at a rate of 40, 80, and 100 percent during 1995-97.

^dIn 1968-69, exhaust emission standards were issued in parts per million (ppm) rather than grams per mile and are, therefore, incompatible with this table.

^eNo estimate available.

^fNo standard set.

^gThe cold CO emission standard is measured at 20 degrees F (rather than 75 degrees F) and is applicable for a 5-year/50,000-mile useful life.

^hGross vehicle weight rating (GVWR) is the maximum design loaded weight. Loaded vehicle weight (LVW) is the curb weight (nominal vehicle weight) plus 300 lbs.

Rob French, Office of Air and Radiation, Environmental Protection Agency, Personal communication, April 1999.

^aNo standard set

^bAlthough emission standards for hydrocarbons and carbon monoxide were in effect for these years, they were not measured in grams/brake horsepower-hour and are, therefore, incompatible with this table.

^cVehicles can meet a composite non-methane hydrocarbons and nitrogen oxides standard of 2.5, if they meet a non-methane hydrocarbon standard of no more than 0.5.

^dSmoke opacity is expressed in percentage for acceleration, lugging, and peak modes (acceleration/lugging/peak). Lugging is when a vehicle is carrying a load.

^eGross vehicle weight rating (GVWR) is the maximum design loaded weight.

^fSeveral testing procedures have been used during the course of exhaust emission control. A steady-state 9-mode test procedure (13-mode for diesel) was used for 1970-83 standards. For 1984, either the steady-state tests or the EPA transient test procedure could be used. For diesels, the EPA transient test was required from 1985 to the present. For gasoline-powered vehicles, either the EPA or MVMA (Motor Vehicle Manufacturers Association) transient test procedure could be used during 1985-86, and the MVMA procedure was required thereafter.

^gEmissions standards apply to the useful life of the vehicle. Useful life was 5 years/50,000 miles through 1983, and 8 years/110,000 miles for model year 1985 and after. 1984 was a transitional year in which vehicles could meet the older standard (and test procedure) or the newer one. Useful life requirement for gasoline-powered trucks meeting NOx standards for 1998 and after is 10 years/110,000 miles. The useful life requirements for heavy diesel truck standards are more complex and vary by vehicle weight, pollutant, test procedure, and year. Consult the U.S. Code of Federal Regulations for further information.

Note:

LDT1 = light truck (6,000 lbs. or less GVWR) up through 3,750 lbs. loaded vehicle weight; LDT2 = light truck (6,000 lbs. or less GVWR) greater than 3,750 lbs. loaded vehicle weight.

^a THCE for methanol vehicles. Does not apply to CNG vehicles.

^b THCE for Tier 0 methanol vehicles. NMHCE for other alcohol vehicles.

^c NMHC for diesel-fueled vehicles.

^d Diesel-fueled vehicles only.

^e Ethanol- and methanol-fueled vehicles only.

California's Low-Emission Vehicle regulations provide for reduced emission vehicles to be available to consumers. Vehicles meeting these standards have even lower emissions than the basic Tier 1 standards for all new vehicles sold in California. Currently, there is a wide array of TLEVs and LEVs, and a few ULEVs, SULEVs and ZEVs on the market. For a listing of the available low emission vehicles, see the California Air Resources Board web site referenced below.

(Additional resources: www.eia.doe.gov)

Note:

Comparisons between prices and price trends in different countries require care. They are of limited validity because of fluctuations in exchange rates; differences in product quality, marketing practices, and market structures; and the extent to which the standard categories of sales are representative of total national sales for a given period.

^a Prices represent the retail prices (including taxes) for premium leaded gasoline. Prices are representative for each country based on quarterly data averaged for the year.

^b Regular gasoline.

^c Data are not available.

^d These estimates are for international comparisons only and do not necessarily correspond to gasoline price estimates in other sections of the book.

^e Adjusted by the U.S. Consumer Price Inflation Index.

In 2001 more than seventy percent of the cost of gasoline in France, Germany, and the United Kingdom went for taxes. Of these countries, the U.S. has the lowest percentage of taxes.

Source:

Table 5.2 and International Energy Agency, *Energy Prices and Taxes, Fourth Quarter 2001*, Paris, France, 2002. (Additional resources: www.iea.org)

Though the cost of crude oil certainly influences the price of gasoline, it is not the only factor which determines the price at the pump. Processing cost, transportation cost, and taxes also play a major part of the cost of a gallon of gasoline. The average price of a barrel of crude oil (in constant 2000 dollars) rose by 69% from 1998 to 2001, while the average price of a gallon of gasoline increased only 26% in this same time period.

Table 5.3

^aCollected from a survey of prices on January 1 of the current year.

^bThese prices were collected from a sample of service stations in 85 urban areas selected to represent all urban consumers. Urban consumers make up about 80% of the total U.S. population.

^cAdjusted by the Consumer Price Inflation Index.

^dData are not available.

^eAverage annual percentage change is from the earliest year possible to 2000.

The fuel prices shown here are **refiner sales prices** of transportation fuels to end users, excluding tax. Sales to end users are those made directly to the ultimate consumer, including bulk consumers. Bulk sales to utility, industrial, and commercial accounts previously included in the wholesale category are now counted as sales to end users.

^a Annual flat fee.

^b Blends with gasoline only.

^c Per 100 ft³.

^d Per therm.

^e Per 120 ft³.

^f Plus a petroleum business tax; the amount varies but is usually in the ballpark of \$0.12–\$0.14.

^g Plus 0.1035 oil franchise tax.

As of January 2001, only five states offered tax exemptions to encourage the use of gasohol for transportation purposes. This list is quite short compared to the 30 states which offered gasohol tax exemptions twenty years ago. Still, the Federal Government encourages gasohol use via a difference in the Federal tax rates of gasoline and gasohol.

Table 5.8
State Tax Exemptions for Gasohol, October 2001

State	Exemption (Cents/gallon of gasohol)
Alaska	8.0
Connecticut	1.0
Idaho	2.5
Iowa	1.0
South Dakota	2.0

^a Reduced diesel rates are specified for marine fleets, trains and certain intercity buses. Diesel rates are also reduced for diesel/alcohol blends. Diesel used exclusively in state and local government fleets, non-profit organization vehicles, school buses and qualified local buses is exempt from Federal taxes.

^bQualified - contains at least 85 percent methanol or ethanol or other alcohol produced from a substance other than petroleum or natural gas.

^cPartially exempt - 85 percent alcohol and produced from natural gas.

^dThousand cubic feet.

These states currently offer extra incentives for ethanol production or consumption. In addition to these tax incentives, many states have regulations in place that State-owned vehicles must fuel with E10 (gasohol) whenever possible.

Table 5.10
States With Ethanol Tax Incentives

State	Ethanol tax incentives
AK	\$0.08/ethanol gallon (blender)
AR	Income tax credit for manufacturers of advanced biofuels—ethanol, methanol or any derivatives which are produced through biological means other than direct fermentation of a food crop
CA	E85 and M85 excise tax is half of the gasoline tax. Neat alcohol fuels are exempt from fuel taxes.
FL	County governments receive waste reduction credits for using yard trash, wood, or paper waste as feed stocks for fuel.
HI	4% ethanol sales tax exemption
ID	\$0.25 excise tax exemption for ethanol or biodiesel
IN	10% gross income tax deduction for improvements to ethanol producing facilities.
IL	Rebate offer for purchase of E85.
IA	\$0.01 (blender)
MN	\$0.20 (producer), \$0.058 excise tax exemption
MO	\$0.20 (producer), \$0.02 excise tax exemption
MT	\$0.30 (producer)
NE	\$0.20 (producer)
NC	Individual income and corporate tax credit of 20% for the construction of an ethanol plant using agricultural or forestry products; an additional 10% if the distillery is powered with alternative fuels.
ND	\$0.40 (producer), income tax credit for the construction of new fuel ethanol plants
OH	\$0.01 (blender), income tax credit
SD	Reduced fuel tax for alternative fuels
WY	\$0.40 (producer)

^aIncludes transplants.

^bAdjusted by the Consumer Price Inflation Index.

The total cost of operating an automobile is the sum of the fixed cost (depreciation, insurance, finance charge, and license fee) and the variable cost (gas and oil, tires, and maintenance), which is related to the amount of travel. Though the variable cost of operating a car in 2001 was higher than 2000, the total cost declined due to lower fixed costs.

Table 5.12
Automobile Operating Cost per Mile, 1985–2001

Model year	Constant 2000 dollars per 10,000 miles ^a			Total cost per mile ^b (constant 2000 cents ^a)	Percentage gas and oil of total cost

^a Adjusted by the implicit GNP price deflator.

^b Data are not available.

^c Transportation Personal Consumption Expenditures include user operating expenses (new and used auto purchases, gas and oil, repair, greasing, washing, parking, storage, rental, other motor vehicles, insurance premiums, tires, tubes and other parts); purchased intercity transportation; and purchased local transportation.

^d Transportation Consumer Price Index includes new and used cars, gasoline, auto insurance rates, intracity mass transit, intracity bus fare, and airline fares.

In 1999 there were 7.7 employees for every hundred vehicles sold in the U.S., according to estimates based on domestic light vehicle sales. Using the average domestic automobile price, estimates show 4.1 employees for every million dollars spent on light vehicles. This includes employees of motor vehicle parts manufacturers and tire manufacturers.

Table 5.16
Motor Vehicle Manufacturing Employment Statistics, 1970–99

Year	Motor vehicles, parts and tires manufacturing employees (thousands)	Sales of domestic light vehicles ^a (thousands)	Employees per hundred vehicles sold	Employees per million dollar expenditure (current)	Employees per million dollar expenditure (constant 1999 ^b)
1970	914	8,516	10.7	28.9	8.0
1975	892	9,106	9.8	19.3	7.4

VEHICLES IN USE

Both the Federal Highway Administration (FHWA) and The Polk Company report figures on the automobile and truck population each year. The two estimates, however, differ by as much as 25.6% for trucks (1992). The differences can be attributed to several factors:

- The FHWA data include all vehicles which have been registered at any time throughout the calendar year. Therefore, the data include vehicles which were retired during the year and may double count vehicles which have been registered in different states or the same states to different owners. The Polk Company data include only those vehicles which are registered on July 1 of the given year.
- The classification of mini-vans, station wagons on truck chasses, and utility vehicles as passenger cars or trucks causes important differences in the two estimates. The Polk Company data included passenger vans in the automobile count until 1980; since 1980 all vans have been counted as trucks. Recently, the Federal Highway Administration adjusted their definition of automobiles and trucks. Starting in 1993, some minivans and sport utility vehicles that were previously included with automobiles were included with trucks. This change produced a dramatic change in the individual percentage differences of cars and trucks. The difference in total vehicles has been less than 5% each year since 1990 and does not appear to be significantly affected by the FHWA reclassifications.
- The FHWA data include all non-military Federal vehicles, while The Polk Company data include only those Federal vehicles which are registered within a state. Federal vehicles are not required to have State registrations, and, according to the General Services Administration, most Federal Vehicles are not registered.

According to The Polk Company statistics, the number of passenger cars in use in the U.S. declined from 1991 to 1992. This is the first decline in vehicle stock since the figures were first reported in 1924. However, the data should be viewed with caution. A redesign of Polk's approach in 1992 allowed a national check for duplicate registrations, which was not possible in earlier years. Polk estimates that, due to processing limitations, its vehicle population counts may have been inflated by as much as 1½ percent. Assuming that percentage is correct, the number of passenger cars in use would have declined from 1991 to 1992 under the previous Polk method. The growing popularity of light trucks being used as passenger vehicles could also have had an impact on these figures.

The line on this graph shows the total vehicles per thousand people in the U.S. from 1900 to 2000. The symbols show the 1998 vehicles per thousand people in other countries/regions of the world. This shows that the Western European nations had the same ratio of vehicles per thousand people in 1998 as the U.S. had in 1970; the former USSR in 1998 had the same ratio of vehicles per thousand people as the U.S. did in 1923; and China in 1998 had the same ratio of vehicles per thousand people as the U.S. did in 1913.

The data on automobile and light truck stock by size class are estimations based on historical sales data. This method assumes a constant scrappage rate for all size classes. The definitions for the size classes are in the Glossary. The data on trucks by weight class are based on estimates from the 1997 Vehicle Inventory and Use Survey (latest available survey) and a 2002 report entitled "Investigation of Class 2b Trucks (Vehicles of 8,500 to 10,000 lbs GVWR)."

(Additional resources: www.polk.com)

^a Total auto and truck vehicle stocks as of July 1, 2000 from The Polk Company (FURTHER REPRODUCTION PROHIBITED).

^b Includes domestic-sponsored imports.

^c Data are not available.

^d In fleets of four or more vehicles.

The trend of using two-axle, four-tire trucks, such as pickups, vans, and sport-utility vehicles, for personal travel is evident in these data; two-axle, four-tire trucks account for 22% more travel in 2000 than in 1970, and automobiles account for 24% less travel in that time period.

Vehicle travel—The average annual vehicle-miles per truck by age were multiplied by the number of trucks in operation by age to estimate the vehicle travel. Average annual miles per truck by age were generated by ORNL from the *1992 Truck Inventory and Use Survey* public use tape provided by U.S. Department of Commerce, Bureau of the Census, Washington, DC, 1995. (Additional resources: www.polk.com, www.census.gov)

^aIncludes trucks from model year 2001 and 2000 which were sold prior to July 1, 2001, and similarly, model years 1971 and 1970 sold prior to July 1, 1970.

The average age of automobiles was lower than the average age of trucks until 1994. Since then, the average automobile age continues to grow, while the average truck age has held about the same. The increasing popularity of light trucks as personal passenger vehicles may have had an influence on the average age of trucks.

^aMean is the sum of the products of units multiplied by age, divided by the total units.

^bMedian is a value in an ordered set of values below and above which there are an equal number of values.

The average age of trucks (classes 1-8) has historically been higher than the average age of automobiles. In 1995, however, this trend reversed, with average automobile age higher than average truck age for the first time. The recent boom in the sales of minivans, sport-utility vehicles, and pick-ups, which are classified as trucks, is influencing the average age of trucks. So many new light trucks are being added into the truck population, that the average age of trucks has been declining since 1993, while the average age of automobiles continues an upward trend.

Figure 6.2. Average Age and Registrations of Automobiles and Trucks, 1970–2000

Source:
See Tables 6.3 and 6.8.

Using current registration data and a scrappage model by Greenspan and Cohen, [1996 paper: <http://www.federalreserve.gov/pubs/feds/1996/199640/199640pap.pdf>], ORNL calculated new automobile scrappage rates. The expected median lifetime for a 1990 model year automobile is 16.9 years. These data are fitted model values which assume constant economic conditions.

^a Beginning in this year the data were revised to include all vans (including mini-vans), pickups and sport utility vehicles.

Because data on Class 2b trucks are scarce, the U.S. DOE funded a study to investigate available sources of data. In the final report, four methodologies are described to estimate the sales of Class 2b trucks.

Table 7.3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks

	CY 1999 truck sales (millions)	MY 2000 truck population (millions)	Percent diesel trucks in population	Average age (years)	Estimated annual miles ^a (billions)	Estimated fuel use (billion ^a gallons)
Class 1	5.7	49.7	0.3%	7.3	672.7	37.4
Class 2a	1.8	19.2	2.5%	7.4	251.9	18.0
Class 2b	0.5	5.8	24.0%	8.6	76.7	5.5

Source: Davis, S.C. and L.F. Truett, *Investigation of Class 2b Trucks (Vehicles of 8,500 to 10,000 lbs GVWR)*, ORNL/TM-2002/49, March 2002, Table 1.

Note: These data were calculated using Methodology 4 from the report.

^aEstimates derived using 2000 population data and 1997 usage data. See source for details.

Nearly one-quarter of autos sold in 2000 were transplants—autos built in the U.S. by a foreign firm.

^a Includes all trucks of 10,000 pounds gross vehicle weight and less sold in the U.S.

^b Excluding transplants.

^c Based on model year data. A transplant is a light truck which was built in the U.S. by a foreign firm. Also included are joint ventures built in the U.S.

^d Based on model year factory installations. Column was revised.

^e Light-duty vehicles include automobiles and light trucks.

^f Data are not available.

^g Indicates less than 1 percent.

The sales-weighted fuel economy of automobiles increased dramatically from 1976 (17.2 mpg) to 1990 (27.6 mpg), but has remained fairly constant since then.

^a Sales period is October 1 of the previous year through September 30 of the current year. These figures represent only those sales that could be matched to corresponding EPA fuel economy values.

Light truck sales have more than tripled from 1976 to 2001. Similar to the automobile trend, the sales-weighted fuel economy of light trucks increased during the late '70's and '80's, but has remained fairly constant in the '90's.

(Additional resources: www.cta.ornl.gov)

Note:

Revised definitions of light trucks are based on vehicle **curb weight** as follows:

Small pickup= <3,500 lbs. Large pickup=3,500-8,500 lbs.

Small van = <4,500 lbs. Large van=4,500-8,500 lbs.

Small utility= <3,500 lbs. Medium utility=3,500-4,799 lbs. Large utility=4,800-8,500 lbs.

^a Sales period is October 1 of the previous year through September 30 of the current year. These figures represent only those sales that could be matched to corresponding EPA fuel economy values.

Back in 1976 only 20% of new light vehicle sales were light trucks. Because of the boom in sales of minivans, sport utility vehicles, and pick-up trucks, today almost half of light vehicle sales are light trucks.

Table 7.9

Note:

Revised definitions of light trucks are based on vehicle **curb weight** as follows:

Small pickup= <3,500 lbs.

Large pickup=3,500-8,500 lbs.

Small van = <4,500 lbs.

Large van=4,500-8,500 lbs.

Small utility= <3,500 lbs.

Medium utility=3,500-4,799 lbs.

Large utility=4,800-8,500 lbs.

^a Sales period is October 1 of the previous year through September 30 of the current year.

^b 1 liter = 61.02 cubic inches.

^c Data are not available.

The sales-weighted curb weight of new automobiles has gone up for each size class from 1989 to 2000.

^a Sales period is October 1 of the current year through September 30 of the next year.

The average auto lost over 300 pounds from 1978 to 1985, but gained a few pounds back since then. Much of the weight reduction was due to the declining use of conventional steel and iron and the increasing use of aluminum and plastics. Conventional steel, however, remained the predominant component of automobiles in 2001 with a 40.8% share of total materials. As conventional steel use has been decreasing, use of high-strength steel has increased.

Table 7.15
Average Material Consumption for a Domestic Automobile,
1978, 1985, and 2001

Material	1978		1985		2001	
	Pounds	Percentage	Pounds	Percentage	Pounds	Percentage

^aAs of the beginning of the year.

The number of conventional refueling stations is declining while the number of vehicles fueling at those stations continues to rise. In 2000, there were 0.82 fueling stations per thousand vehicles. Data for alternative fuels in 2000 indicate that there was an average of 12 stations per thousand alternative fuel vehicles.

Note:

The County Business Patterns (CBP) data published by the Bureau of the Census tells the number of establishments by North American Industry Classification System (NAICS). NAICS is an industry classification system that groups establishments into industries based on the activities in which they are primarily engaged. NAICS 447 represents gasoline stations. However, the CBP gasoline station data differ from the National Petroleum News Survey data; the CBP may not include every gasoline retail outlet due to the classification of the primary activity of the business.

The Corporate Average Fuel Economy standards were established by the U.S. Energy Policy and Conservation Act of 1975 (PL94-163). These standards must be met at the manufacturer level. Though the averages shown here indicate the standards were met in most years, some manufacturers fell short of meeting the standards while others exceeded them.

^a These are fines which are actually collected. Fines which are assessed in certain year may not have been collected in that year.

^b Adjusted using the Consumer Price Inflation Index.

Consumers must pay the Gas Guzzler Tax when purchasing an automobile that has an Environmental Protection Agency (EPA) fuel economy rating less than that stipulated in the table below. The Gas Guzzler Tax doubled in 1991 after remaining constant from 1986 to 1990. The tax has not changed since 1991. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans.

Fuel Economy by Vehicle Speed

ORNL has developed fuel consumption and emissions lookup tables for the Federal Highway Administration, for use in their TRAF series of traffic models (NETSIM, CORSIM, FRESIM), although more generic uses are also possible. To develop the data-based models, vehicles are tested both on-road and on a chassis dynamometer. Engine parameters are measured on-road under real-world driving conditions that cover the vehicle's entire operating envelope. Emissions and fuel consumption are then measured on the chassis dynamometer as functions of engine conditions. The two data sets are merged to produce the final three-dimensional maps as functions of vehicle speed and acceleration. Eight well-functioning, late-model vehicles, and one 1997 model vehicle, have been tested thus far in fully warmed-up conditions.

Similar continuing work is planned for the Department of Energy as well as FHWA, which will include more well-functioning, late-model vehicles, pre-control (1960's) vehicles, malfunctioning high-emitter vehicles, light-duty diesel vehicles (cars and pickup trucks), alternative fuel vehicles, and possibly heavy-duty diesel vehicles. ORNL will also be developing cold-start algorithms to enhance the existing models, since emissions and fuel economy generally improve as vehicles warm up to normal operating temperatures.

^a PFI = port fuel injection. TBI = throttle- body fuel injection.

The two earlier studies by the Federal Highway Administration (FHWA) indicate maximum fuel efficiency was achieved at speeds of 35 to 40 mph. The recent FHWA study indicates greater fuel efficiency at higher speeds. Note that the 1973 study did not include light trucks.

Note:

For specifications of the tested vehicles, please see Table 7.21.

The Environmental Protection Agency (EPA) tests new vehicles to determine fuel economy ratings. The city and highway fuel economies that are posted on the windows of new vehicles are determined by testing the vehicle during these driving cycles. The driving cycles simulate the performance of an engine while driving in the city and on the highway. Once the urban cycle is completed, the engine is stopped, then started again for the 8.5 minute hot start cycle.

Code of Federal Regulations, 40CFR, "Subpart B - Fuel Economy Regulations for 1978 and Later Model Year Automobiles - Test Procedures," July 1, 1988 edition, p. 676.

The New York Test Cycle was developed in the 1970's in order to simulate driving in downtown congested areas. The Representative Number Five Test Cycle was developed recently to better represent actual on-road driving by combining

Figure 7.5. New York City Driving Cycle

Figure 7.6. Representative Number Five Driving Cycle

Source:
Data obtained from Michael Wang, Argonne National Laboratory, Argonne, IL, 1997.

The US06 driving cycle was developed as a supplement to the Federal Test Procedure. It is a short-duration cycle (600 seconds) which represents hard-acceleration driving.

Figure 7.7. US06 Driving Cycle

Source:

Data obtained from Michael Wang, Argonne National Laboratory, Argonne, IL, 1997.

Researchers at Argonne National Laboratory have estimated the fuel economy of a midsize car using driving cycles from different countries. These results illustrate the difference in fuel economy which can be obtained from the same vehicle using different test cycles.

Table 7.26
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles

Driving Cycle	Projected fuel economy for a 1995 composite midsize vehicle ^a
Japanese 10/15 mode test cycle	17.5 mpg
New European Driving Cycle (NEDC)	22.0 mpg
U.S. EPA city cycle (LA4)	19.8 mpg
U.S. EPA highway cycle	32.1 mpg
U.S. Corporate Average Fuel Economy cycle	23.9 mpg

Source:

Santini, D., A. Vyas, J. Anderson, and F. An, *Estimating Trade-Offs along the Path to the PNGV 3X Goal*, presented at the Transportation Research Board 80th Annual Meeting, Washington, DC, January 2001.

^aThe 1995 composite midsize vehicle is an average of a Chevrolet Lumina, Chrysler Concord, and Ford Taurus. The fuel economies were projected using the National Renewable Energy Laboratory's Advanced Vehicle Simulator (ADVISOR) model.

When comparing data between countries, one must realize that different countries have different testing cycles to determine fuel economy and emissions. This table compares various statistics on the European, Japanese, and U.S. testing cycles [for fuel economy measurements, the U.S. uses the formula, $1/\text{fuel economy} = (0.55/\text{city fuel economy}) + (0.45/\text{highway fuel economy})$]. Most vehicles will achieve higher fuel economy on the U.S. test cycle than on the European or Japanese cycles.

Table 7.27
Comparison of U.S., European, and Japanese Driving Cycles

	Time (seconds)	Percent of time stopped or decelerating	Distance (miles)	Average speed (mph)	Maximum speed (mph)	Maximum acceleration (mph/s)
Japanese 10/15 mode test cycle	631	52.3	2.6	14.8	43.5	1.78
New European Driving Cycle (NEDC)	1,181	24.9	6.84	20.9	74.6	2.4
U.S. EPA city cycle (LA4) ^a	1,372	43.2	7.5	19.5	56.7	3.3
U.S. EPA highway cycle	765	9.3	17.8	48.2	59.9	3.3
U.S. Corporate Average Fuel Economy cycle	2,137	27.9	10.3	29.9	59.9	3.3

Santini, D., A. Vyas, J. Anderson, and F. An, *Estimating Trade-Offs along the Path to the PNGV 3X Goal*, presented at the Transportation Research Board 80th Annual Meeting, Washington, DC, January 2001.

^aThe actual Federal Procedure (FTP), which is also the test for emissions certification, repeats the first 505 seconds of the Federal Urban Driving Simulation cycle, hot started, after a 10 minute hot soak. Starting with Model Year 2001, the emissions test-but not the fuel economy test-incorporates a supplemental cycle that simulates aggressive urban driving, coupled with an added air conditioning load.

Total traffic fatalities were lower in 2000 than in 1975. Thirteen percent of traffic fatalities in 2000 were not vehicle occupants (pedestrians, cyclists, etc.).

Traffic Safety Facts 2000, Washington, DC, December 2001, pp. 18 and 110. (Additional resources: www.nhtsa.dot.gov)

In 2000, the fatality rate for vehicle occupants per 100 million vehicle miles are surprisingly similar for passenger cars and light trucks—1.3 and 1.2 fatalities per 100 million vehicle miles, respectively. However, the injury rate per 100 million vehicle miles is much lower for light trucks (94) than for passenger cars (130).

(Additional resources: www.nhtsa.dot.gov)

^aData are not available.

^bVehicle-miles are estimated by the National Highway Traffic Safety Administration and do not match Federal Highway data.

In 2000, nearly 38% of all passenger car and light truck fatal crashes were single-vehicle crashes. Because there are so many passenger cars on the roads compared to the other vehicle types, total passenger car crashes are half of total crashes. Most crashes are multiple-vehicle crashes with property damage only.

Table 7.30
Crashes by Crash Severity, Crash Type, and Vehicle Type, 2000

Vehicle type	Fatal		Injury		Property damage only		Total crashes
	Single-vehicle crash	Multiple-vehicle crash	Single-vehicle crash	Multiple-vehicle crash	Single-vehicle crash	Multiple-vehicle crash	
Passenger cars	10,208	17,288	363,000	2,033,000	717,000	3,750,000	6,891,000

Note:

Multiple-vehicle crashes cannot be totaled over vehicle type due to duplication of accidents between vehicle types.

^a Trucks 10,000 lbs. gross vehicle weight rating or less, including pickups, vans, and utility vehicles.

^b Trucks over 10,000 pounds gross vehicle weight rating including single-unit trucks and truck tractors.

For fatal crashes in 2000, sport-utility vehicles (SUVs) had the highest rollover rate (36.3%) while passenger cars had the lowest (15.3%). This does not mean that the rollover caused the fatality, just that a vehicle in the crash rolled over.

(Additional resources: www.fhwa.dot.gov)

Note:

Highway Statistics 1999 data were not used.

^a The Federal Highway Administration changed the combination truck travel methodology in 1993.

^b The fuel economy for combination trucks is not the same as the fuel economy for Class 8 trucks. Fuel economy for Class 8 trucks is shown in Table 8.5.

Sales of the medium trucks, classes 3–6 rose substantially in 1998. Light trucks under 10,000 lbs., continue to dominate truck sales.

^a Sales include domestic-sponsored imports.

^b Data for 1970 is based on new truck registrations.

^c Data are not available.

Vehicle Inventory and Use Survey

The Vehicle Inventory and Use Survey (VIUS), which was formerly the Truck Inventory and Use Survey (TIUS), provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in each state. The name of the 1997 survey was changed to the Vehicle Inventory and Use Survey due to future possibilities of including additional vehicle types. The 2002 VIUS, however, will only include trucks. Data from the 2002 VIUS is expected in 2004. Copies of the 1997 VIUS report or CD may be obtained by contacting the U.S. Bureau of the Census, Transportation Characteristics Surveys Branch (301) 457-2797. Internet site: **www.census.gov/svsd/www/tiusview.html**

Since 1987 the survey has included minivans, vans, station wagons on truck chassis, and sport utility vehicles in addition to the bigger trucks. The 1977 and 1982 surveys did not include those vehicle types. The estimated number of trucks that were within the scope of the 1997 VIUS and registered in the U.S. as of July 1, 1997, was 72.8 million. These trucks were estimated to have been driven a total of 1,044 billion miles during 1997, an increase of 32.8% from 1992. The average annual miles traveled per truck was estimated at 14,300 miles.

In the 1997 VIUS, there are several ways to classify a truck by weight. The survey respondent was asked the average weight of the vehicle or vehicle-trailer combination when carrying a typical payload; the empty weight (truck minus cargo) of the vehicle as it was usually operated; and the maximum gross weight at which the vehicle or vehicle-trailer combination was operated. The Census Bureau also collected information on the Gross Vehicle Weight Class of the vehicles (decoded from the vehicle identification number) and the registered weight of the vehicles from the State registration files. Some of these weights are only provided in categories, while others are exact weights. Since all these weights could be quite different for a single truck, the tabulations by weight can be quite confusing. For illustration of this, see Tables 8.3 and 8.4. The first set of data are based on the Gross Vehicle Weight Class of the vehicle when it was manufactured; the data on Table 8.5 are based on the average weight as reported by the respondent. There is a 24% difference in the number of Class 1 trucks (6,000 lbs. and less). In most tables, the Gross Vehicle Weight Class was used. However, on the tables comparing different survey estimates, average weight must be used, as the older surveys did not include data on the Gross Vehicle Weight rating.

Table 8.4
Truck Statistics by Gross Vehicle Weight Class, 1997

Manufacturer's gross vehicle weight class	Number of trucks	Percentage of trucks	Average annual miles per truck	Average fuel economy	Gallons of fuel used (millions)	Percentage of fuel use
1) 6,000 lbs and less	45,240,632	62.14%	13,328	17.82	35,184	44.34%

Estimates are based on data provided on the following public use files: U.S. Department of Commerce, Bureau of the Census, Census of Transportation, Washington, DC, *1992 Truck Inventory and Use Survey*, 1995; *1997 Vehicle Inventory and Use Survey*, 2000. (Additional resources: www.census.gov/svsd/www/tiusview.html)

Note:

Based on average fuel economy as reported by respondent.

As expected, most light trucks travel within 50 miles of their home base and refuel at public stations. Sixty percent of heavy trucks travel over 50 miles from their home base and 36% of them refuel at central company-owned refueling stations.

^a Business and personal services.

In 1997 nearly 60% of all truck fleets use public fueling stations as their primary refueling facility. As expected, larger fleets use central company-owned facilities more than smaller fleets. Mid-size fleets (10–500 vehicles) use off-site contract facilities more than the smaller or larger fleets.

Table 8.8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 1997

Commodity Flow Survey

The Commodity Flow Survey (CFS) is designed to provide data on the flow of goods and materials by mode of transport. The 1993 and 1997 CFS are a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and include major improvements in methodology, sample size, and scope. In 1997, CFS used a sample of 100,000 domestic establishments randomly selected from a universe of about 800,000 establishments engaged in mining, manufacturing, wholesale, auxiliary establishments (warehouses) of multi-establishment companies, and some selected activities in retail and service was used. Each selected establishment reported a sample of approximately 25 outbound shipments for a one-week period in each of the four calendar quarters of 1997. This produced a total sample of over 5 million shipments. For each sampled shipment, zip codes of origin and destination, 5-digit Standard Classification of Transported Goods (SCTG) code, weight, value, and modes of transport, were provided. Establishments also reported whether the shipment was containerized, a hazardous material, or an export.

The 1993 and 1997 CFS differ from previous surveys in their greatly expanded coverage of intermodalism (i.e., shipments which travel by at least two different modes, such as rail and truck). Earlier surveys reported only the principal mode. The 1993 and 1997 surveys report all modes used for the shipment (for-hire truck, private truck, rail, inland water, deep sea water, pipeline, air, parcel delivery or U.S. Postal Service, other mode, unknown). Route distance for each mode for each shipment as imputed from a mode-distance table was developed by Oak Ridge National Laboratory. Distance, in turn, was used to compute ton-mileage by mode of transport.

For more information about the CFS, contact the Commodity Flow Survey Branch, Department of Commerce, Bureau of the Census, Services Division at (301) 457-2108, or visit the following Internet site: www.bts.gov/cfs.

Industries covered by the 1997 Commodity Flow Survey (CFS) shipped over 11 billion tons of goods worth almost \$7 trillion. Compared to the 1993 CFS, the value of shipments is up 9.2% and ton shipped are up 14.5%. By value, intermodal shipments increased 31.2% over 1993.

American Public Transit Association, *2002 Public Transportation Fact Book*, Washington, DC, 2002, Tables 30, 42, 46, 65, 66 and 67.

^a Comparisons cannot be made with data before 1992. Beginning in 1992, data were available on non-diesel fuel consumption (i.e. propane, compressed natural gas, methanol).

There are currently not many sources of data on intercity and school buses. The Eno Foundation for Transportation publishes petroleum use for intercity and school buses, and passenger-miles for intercity buses. The Federal Highway Administration publishes an estimate of the total number of school buses. School Bus Fleet magazine also contains statistics on school buses (www.schoolbusfleet.com/stats.cfm).

Table 8.13
Summary Statistics on Intercity and School Buses, 1970–2000

Year	Intercity bus passenger-miles (billions)	Intercity bus energy use (trillion Btu)	Number of school buses	School bus energy use (trillion Btu)

	<i>M85</i>	16,918
	<i>E85^a</i>	48,022
	<i>Electric</i>	10,400
Table 9.4	Number of alternative fuel refuel sites, 2001	5,542
	<i>LPG</i>	3,403
	<i>CNG</i>	1,232
	<i>Electric</i>	693
Table 9.5	U.S. sales of advanced technology vehicles (through June 2002)	
	<i>Honda Insight</i>	9,955
	<i>Toyota Prius</i>	29,179

Fuel type abbreviations are used throughout this chapter.

<i>LPG</i>	=	<i>liquified petroleum gas</i>
<i>CNG</i>	=	<i>compressed natural gas</i>
<i>M-85</i>	=	<i>85% methanol, 15% gasoline</i>
<i>E-85</i>	=	<i>85% ethanol, 15% gasoline</i>
<i>M-100</i>	=	<i>100% methanol</i>
<i>E-95</i>	=	<i>95% ethanol, 5% gasoline</i>
<i>LNG</i>	=	<i>liquified natural gas</i>

^aDoes not include flex-fuel vehicles.

Alternative Fuels

The U.S. Department of Energy (DOE) defines alternative fuels as fuels which are substantially non-petroleum and yield energy security and environmental benefits. DOE currently recognizes the following as alternative fuels:

- methanol and denatured ethanol as alcohol fuels (alcohol mixtures that contain no less than 70% of the alcohol fuel),
- natural gas (compressed or liquefied),
- liquefied petroleum gas,
- hydrogen,
- coal-derived liquid fuels
- fuels derived from biological materials, and
- electricity (including solar energy).

DOE has established the Alternative Fuels Data Center (AFDC) in support of its work aimed at fulfilling the Alternative Motor Fuels Act (AMFA) directives. The AFDC is operated and managed by the National Renewable Energy Laboratory (NREL) in Golden, Colorado.

The purposes of the AFDC are:

- to gather and analyze information on the fuel consumption, emissions, operation, and durability of alternative fuel vehicles, and
- to provide unbiased, accurate information on alternative fuels and alternative fuel vehicles to government agencies, private industry, research institutions, and other interested organizations.

The data are collected for three specific vehicle types: (1) light vehicles, including automobiles, light trucks, and mini-vans; (2) heavy vehicles such as tractor-trailers and garbage trucks; and (3) urban transit buses. Much of the AFDC data can be obtained through their web site: **www.afdc.doe.gov**. Several tables and graphs in this chapter contain statistics which were generated by the AFDC.

DOE is sponsoring the **National Alternative Fuels Hotline** for Transportation Technologies in order to assist the general public and interested organizations in improving their understanding of alternative transportation fuels. The Hotline can be reached by dialing **1-800-423-1DOE**, or on the Internet at **www.afdc.doe.gov/hotline.html**.

There are more LPG vehicles in use than any other alternative fuel vehicle. The population of E85 vehicles, however, has grown the most since 1992. For details on alternative fuel use by fuel type, see Table 2.3.

Table 9.1
Estimates of Alternative Fuel Vehicles in Use, 1992–2001

Fuel type	1992	1995	1998	1999	2000 ^a	2001 ^a	Average annual percentage change 1992–2001

Note:

These data were released in October 1999. Please check the source web site for updates which were not available when this document went to press.

^aBased on plans or projections.

^bDoes not include flex-fuel vehicles.

Nearly 90% of private alternative fuel vehicles are fueled by LPG and CNG. The Federal Government does not own many LPG vehicles; its alternative fuel vehicle fleet is split almost 50/50 between CNG and E-85 vehicles in 2001.

Table 9.2
Estimates of Alternative Fuel Vehicles by Ownership, 1996 and 2001

Fuel type	Private		State and local government		Federal Government	
	1996	2001 ^a	1996	2001 ^a	1996	2001 ^a

Clean Cities is a locally-based government/industry partnership, coordinated by the U.S. Department of Energy to expand the use of alternatives to gasoline and diesel fuel. By combining the decision-making with voluntary action by partners, the "grass-roots" approach of Clean Cities departs from traditional "top-down" Federal programs.

The Honda Insight, Civic Hybrid and Toyota Prius are the three advanced technology vehicles which are currently available to the public in the U.S. They are hybrid vehicles, using both electricity (from batteries) and mechanical power (from a small internal combustion engine). Learn more about DOE's hybrid vehicle program at: www.ott.doe.gov/hev.

Table 9.5

	<i>Business fleets</i>	22,780
	<i>Utility fleets</i>	13,399
	<i>Government fleets</i>	12,895
Table 10.3	Average annual miles per light truck (<8,500 lbs. GVW)	
	<i>Business fleets</i>	26,282
	<i>Utility fleets</i>	12,096
	<i>Government fleets</i>	6,797
Table 10.4	Federal government vehicles, FY 2000	567,581
	<i>Automobiles</i>	113,572
	<i>Buses</i>	5,257
	<i>Light trucks (<8,500 lbs. GVW)</i>	344,949
	<i>Medium trucks (8,500–26,000 lbs. GVW)</i>	77,688
	<i>Heavy trucks (>26,000 lbs. GVW)</i>	26,115

Significant changes have been made in recent years to fleet vehicle estimations. Newly available data improve the accuracy of fleet vehicle estimates but, at the same time, make it impossible to compare the data historically. Therefore, only the latest data are presented here.

Figure 10.1. Fleet Vehicles in Service as of February 1, 2001

Source:
Bobit Publishing Company, Automotive Fleet Research Department, *Automotive Fleet Factbook 2002*, Redondo Beach, CA, 2002. (Additional resources: www.fleet-central.com)

^aTaxi category includes vans.
^bRental category includes vans and sports utility vehicles under **automobiles**, not trucks.

According to these estimates of light fleet vehicle population, utility and government fleets have a greater share of light trucks in their light vehicle population than business fleets do. This is also reflected in the new vehicle purchases.

Table 10.1
Light Vehicles in Fleets of 10 or More, 2000

	Business	Utility	Government
Cars	60.7%	41.5%	37.7%
Light trucks ^a and vans	39.3%	58.5%	62.3%
Total light vehicles	7,694,733	763,190	3,152,831

See Appendix A for Fleet Vehicle Data, Light Fleet Vehicle Population.

Table 10.2
New Light Fleet Vehicle Purchases by Vehicle Type, 2000

	Business	Utility	Government
Cars	73.2%	11.8%	47.1%
Light trucks ^a and vans	26.8%	88.2%	52.9%
Total light vehicles	2,146,351	355,989	235,085

Source:

See Appendix A for Fleet Vehicle Data., Light Fleet Vehicle New Sales.

^aIn this study, light trucks are <10,000 lbs gross vehicle weight.

The average length of service for an intermediate size fleet car is 30 months. Of the light vehicle types, full-size vans have the longest average months in service. Medium trucks are in service for an average of 70 months.

Table 10.3
Average Length of Time Business Fleet
Vehicles are in Service, 2000

Vehicle type	Average months in service
Compact cars	33.8
Intermediate cars	30.0
Pickup trucks	37.1
Minivans	32.9
Sport utility vehicles	30.8
Full-size vans	59.1
Medium trucks	70.4

All light vehicles	24,158	12,583	8,328

Source:

See Appendix A for Fleet Vehicle Data., Light Fleet Vehicle Travel.

^aIn this study, light trucks are <10,000 lbs gross vehicle weight.

These data, which apply to domestic Federal fleet vehicles, indicate that sedans and station wagons have the highest average annual miles per vehicle, followed closely by 4x4 trucks. There is a 6,000-mile difference in the average for 4x2 light trucks as opposed to 4x4 light trucks.

^aThese data are reported under new requirements for FY 1997. Data for some agencies are missing or incomplete.

The Energy Policy Act of 1992 (EPACT) set alternative fuel vehicle acquisition requirements for Federal and State Governments, alternative fuel providers and the private sector. Additional rule making has adjusted the original purchase requirements. State government and alternative fuel providers requirements began in 1997.

Table 10.8

Transportation (18.8%) is second only to housing (31.1%) as the largest expenditure for the average household. In 2000, approximately 17.4% of transportation expenditures were for purchasing gasoline and motor oil. There is an average of two vehicles per household.

Table 11.3
Average Annual Expenditures of Households by Income, 2000^a

	All households	Income before taxes

^a Public assistance monies are included in reported income. Data for those reporting income.

^b Percentages may not sum to totals due to rounding.

^c Includes alcoholic beverages.

^d Includes personal care, reading, education, tobacco and smoking supplies, cash contributions, and miscellaneous items.

^e The term household refers to a “consumer unit,” which is defined differently than households on Table 11.1.

Household vehicle ownership shows a dramatic increase from 1960 to 1990. In 1960, nearly 79% of households owned less than two vehicles; by 1990, it declined to 45%. Census data prior to 1990 indicated that the majority of households owned one vehicle; in 1990 that changed to two vehicles.

Table 11.4
Household Vehicle Ownership, 1960–2000 Census
(percentage)

	No vehicles	One vehicle	Two vehicles	Three or more vehicles	Total vehicles ^a
1960	21.53%	56.94%	19.00%	2.53%	54,766,718
1970	17.47%	47.71%	29.32%	5.51%	79,002,052

^aEstimates using Census Bureau data; these data on the total number of vehicles do not match the figures on Table 11.1. The figures on Table 11.1, from R.L. Polk and Company, are the preferred data.

1995 Nationwide Personal Transportation Survey

The 1995 Nationwide Personal Travel Survey (NPTS) is a national survey designed to collect data on the nature and characteristics of personal travel. The definition of a trip in the NPTS is “any one-way travel from one address to another by private motor vehicle, public transportation, bicycle, or walking.” Excluded from the survey are jogging and walking for exercise, as is all bicycling and walking for individuals under 5 years of age. The survey collects detailed data on household trips, their purposes and the transportation modes used. The NPTS is sponsored by several agencies of the U.S. Department of Transportation and is conducted approximately every seven years. Since each of the surveys differ somewhat in terminology, survey procedure, and target population, one should be cautious when comparing statistics from one survey to the next. Improved methodologies used in the collection of the trip information in the 1995 NPTS make it impossible to compare these data with past NPTS survey data. Thus, the 1990 NPTS trip data have been adjusted to make it comparable with the latest survey. Both the original 1990 data and the adjusted 1990 data are shown in tables comparing trip information. The 1995 trip data should only be compared to the adjusted 1990 trip data, and the original trip 1990 data should be compared with previous surveys. Additional analyses can be done on the 1995 NPTS data through the Internet site: www-cta.ornl.gov/npts.

Table 11.5
Demographic Statistics
1969, 1977, 1983, 1990, and 1995 NPTS

	1969	1977	1983	1990	1995	Percent change 1969–95

Source:

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 2. Data for 1995 were generated from the Internet site www-cta.ornl.gov/npts.
(Additional resources: www.fhwa.dot.gov)

Note:

Average vehicle trip length for 1990 and 1995 is calculated using only those records with trip mileage information present. The 1969 survey does not include pickups and other light trucks as household vehicles.

The 1995 NPTS data should be compared only to the 1990 adjusted data due to survey methodology improvements in collecting trip information. The original 1990 data are comparable to all previous surveys; however, comparisons should always be made with caution because of differing survey methodologies.

Table 11.6
Average Annual Vehicle-Miles, Vehicle Trips and
Trip Length per Household
1969, 1977, 1983, 1990, and 1995 NPTS

	Journey-to-work ^a	All trips
<i>Average annual vehicle-miles per household</i>		
1969	4,183	12,423
1977	3,815	12,036
1983	3,538	11,739
1990 original	4,853	15,100

1995	11.8	9.1

Source:

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 7. Data for 1995 were generated from the Internet site www-cta.ornl.gov/npts. 1990 adjusted data - Oak Ridge National Laboratory, Oak Ridge, TN, August 1998. (Additional resources: www.fhwa.dot.gov, www-cta.ornl.gov/npts)

^aIt is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

The 1995 NPTS data should be compared only to the 1990 adjusted data due to survey methodology improvements in collecting trip information. The original 1990 data are comparable to all previous surveys; however, comparisons should always be made with caution because of differing survey methodologies.

Table 11.7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length
per Household by Selected Trip Purposes
1983, 1990, and 1995 NPTS

	Journey-to-work ^a	Shopping	Social and recreational	All purposes ^b
<i>Average annual PMT per household</i>				
1983	4,586	2,567	8,964	22,802
1990 original	5,637	2,674	8,567	24,803
1990 adjusted	5,637	3,343	11,308	30,316
1995	7,740	4,659	10,571	34,459
<i>Average annual person trips per household</i>				
1983	537	474	728	2,628
1990 original	539	504	662	2,673
1990 adjusted	539	630	874	3,262
1995	676	775	953	3,828
<i>Average person trip length (miles)</i>				
1983	8.5	5.4	12.3	8.7

U.S. Department of Transportation, Federal Highway Administration, Nationwide Personal Transportation Study, Public Use Tapes, Washington, DC. Data for 1995 were generated from the Internet site www-cta.ornl.gov/npts. 1990 adjusted data - Oak Ridge National Laboratory, Oak Ridge, TN, August 1998. (Additional resources: www.fhwa.dot.gov, www-cta.ornl.gov/npts)

Note:

Average person trip length for 1990 and 1995 is calculated using only those records with trip mileage information present. "All purposes" includes unreported trip purposes.

^aIt is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

^bIncludes trip purposes not shown on this table.

In 1995 vehicle-miles traveled (vmt) for a three-person household is nearly 25,000 miles. The number of drivers in a household makes a big difference in vmt, as does the presence of children in the household. Households with children have 46% more vmt than households without children.

Table 11.8
Average Number of Vehicles and Vehicle Travel per Household,
1990 and 1995 NPTS

	Average number of vehicles per household		Average vehicle-miles traveled per household	
Number of Drivers	1990	1995	1990	1995

Source:
U.S. Department of Transportation, Federal Highway Administration, Nationwide Personal Transportation Survey, Washington, DC, 1997.
(Additional resources: www.fhwa.dot.gov, www-cta.ornl.gov/npts)

The average vehicle occupancy, calculated as person-miles per vehicle-mile, is highest for social and recreational purposes. The highest vehicle occupancy levels for all purposes were in 1977. The increase in number of vehicles per household and the decrease in average household size could have contributed to the decline since then.

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92027, Washington, DC, March 1992, Figure 6. Data from 1995 were generated from the public use file.

(Additional resources: www.fhwa.dot.gov, www.cta.ornl.gov/npts)

Less than 27% of all household vehicle-miles are trips to or from work. Errands such as family and personal business and shopping (combined) make up almost a third of vehicle travel. One quarter of all trips 75 miles or longer (one way) were for the purpose of visiting friends or relatives.

Table 11.9
Vehicle-Miles by Trip Purpose, 1995 NPTS

Purpose of trip	Daily trip vehicle-miles (<75 miles one-way)	Long trip vehicle-miles (≥ 75 miles one-way)	Total trip vehicle-miles
To or from work	31.1%	4.2%	26.8%
Work-related business	6.7%	14.7%	7.9%
Shopping	13.4%	3.5%	11.9%
Other family or personal business	20.6%	14.2%	19.6%
School/church	3.8%	3.1%	3.7%
Doctor/dentist	1.5%	1.3%	1.5%
Vacation	1.0%	10.0%	2.4%
Visit friends or relatives	9.4%	25.7%	12.0%
Other social or recreational	12.4%	22.3%	13.9%
Other	0.1%	1.1%	0.3%
Not ascertained	0.0%	0.0%	0.0%

As households owned more vehicles, the average annual miles for the most frequently driven vehicle increased. For example, the most frequently driven vehicle in five-vehicle households was driven 26% more per year than the one in two-vehicle households (21,177 miles vs. 16,804 miles).

Table 11.10
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS

Vehicle ^a	One-vehicle household	Two-vehicle household	Three-vehicle household	Four-vehicle household	Five-vehicle household

^aVehicles are ranked by descending annual miles driven.

Historically, the data from the Nationwide Personal Transportation Survey (NPTS) are based on estimates reported by survey respondents. For the 1995 survey, odometer data was also collected. These data indicate that respondents overestimate the number of miles driven in a year.

Table 11.12
Average Annual Miles Per Household Vehicle by Vehicle Age

Vehicle age (years)	1983 self-reported	1990 self-reported	1995 self-reported	1995 odometer
Under 1	8,200	19,600	15,900	15,600
1	15,200	16,800	16,800	14,500
2	16,800	16,600	15,500	14,800

Note:

Data include all household vehicles, and have been rounded to the nearest hundred.

In 1995 the average journey-to-work speed was faster, but the travel time still increased, due to an increase in the average travel distance. Journeys-to-work using public transportation continued to take twice as long as private transportation, though there is only a slight difference in travel distance.

Table 11.13
Journey-to-Work Statistics
1983, 1990, and 1995 NPTS^a

Year	Private transportation	Public transportation	Other ^b	Total
<i>Average travel time^c (Index: 1983 Private = 1.00)</i>				
1983	1.00	2.26	0.60	1.03
1990	1.09	2.34	0.70	1.11
1995	1.14	2.39	1.07	1.18
<i>Average trip length (Index: 1983 Private = 1.00)</i>				
1983	1.00	1.33	0.16	0.96

^aIt is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

^bIncludes airplane, Amtrak, taxi, bicycle, school bus, moped, walk and other.

^cDoes not include time spent waiting for transportation.

^dDoes not include segmented trips.

According to the U.S. Census data, the percentage of workers who car pooled has dropped from 19.7% in 1980 to 11.2% in 2000. The percent of workers using public transit declined from 6.4% to 5.3% in the ten year period between 1980 and 1990, but stayed relatively the same from 1990 to 2000 (5.2%). The average travel time increased by 2.6 minutes from 1980 to 2000.

Table 11.14
Means of Transportation to Work, 1980, 1990 and 2000 Census

Means of transportation	1980 Census		1990 Census		2000 Census

1995 American Travel Survey

The American Travel Survey (ATS) was conducted by the Bureau of Transportation Statistics, U.S. Department of Transportation, to obtain information about the long-distance travel of persons living in the United States. Approximately 80,000 randomly selected households were interviewed for the survey, which collected information about all trips of 100 miles or more, one-way, taken by household members in 1995. The ATS data provide detailed information on state-to-state travel, as well as travel to and from metropolitan areas by mode of transportation.

For additional information about the American Travel Survey, contact the Bureau of Transportation Statistics at (202) 366-3282 or visit the following Internet site: www.bts.gov/ats

U.S. Department of Transportation, Bureau of Transportation Statistics, *1995 American Travel Survey Profile*, Washington, DC, October 1997, p. 2. (Additional resources: www.bts.gov/ats)

Note:

Definitions of divisions and regions are in Appendix C.

Personal-use vehicles are by far the most predominant means of transportation on long-distance trips (100 miles or more, one way); two-thirds of those personal vehicle trips are pleasure trips.

Table 11.17
Long-Distance Trips^a by Mode and Purpose, 1995

Principal means of transportation	Main purpose of trip					
	Pleasure				Personal business	Total
	Business	<i>Visit friends or relatives</i>	<i>Leisure</i>	Total pleasure

^aA long-distance trip is any trip of 100 miles or more, one way.

Those with a household income of less than \$25,000 account for more than half (54%) of intercity bus person-trips. Those with a household income of \$50,000 or more account for two-thirds (66%) of commercial airplane person-trips.

(Additional resources: www.bts.gov, www.faa.gov)

^aData are for all U.S. air carriers reporting on Form 41.

^bScheduled services of domestic operations only. The average passenger trip length for international operations is more than three and a half times longer than for domestic operations.

^cAvailable seats per aircraft is calculated as the ratio of available seat-miles to revenue aircraft-miles.

^dPassenger load factor is calculated as the ratio of revenue passenger-miles to available seat-miles for scheduled and nonscheduled services.

^eEnergy use includes fuel purchased abroad for international flights.

^fScheduled services only.

^gData are not available.

General aviation includes: (1) aircraft operating under general operating and flight rules; (2) not-for-hire airplanes with a seating capacity of 20 or more or a maximum payload capacity of 6,000 lbs. or more; (3) rotocraft external load operations; (4) on-demand and commuter operations not covered under Federal Aviation Regulations Part 121; and (5) agricultural aircraft operations.

^aActive fixed-wing general aviation aircraft only.

^bIncludes rotocraft.

^cData are not available.

In the early seventies, domestic waterborne commerce accounted for over 60% of total tonnage, but by 1994 foreign tonnage grew to more than half of all waterborne tonnage and has continued to grow each year since.

^aAll movements between the U.S. and foreign countries and between Puerto Rico and the Virgin Islands and foreign countries are classified as foreign trade.

^bAll movements between U.S. ports, continental and noncontiguous, and on the inland rivers, canals, and connecting channels of the U.S., Puerto Rico, and the Virgin Islands, excluding the Panama Canal. Beginning in 1996, fish was excluded for internal and intra port domestic traffic.

^aGrand total for self-propelled and non-self-propelled.

^bThese figures are not consistent with the figures on Table 6.4 because intra-territory tons are not included in this table. Intra-territory traffic is traffic between ports in Puerto Rico and the Virgin Islands.

Fifty-five percent of all domestic marine cargo in 2000 were energy-related products (petroleum, coal, coke). The majority of the energy-related products were shipped internally and locally (66%). Barge traffic accounted for 95.7% of all internal and local waterborne commerce.

Table 12.5

(Additional resources: www.wrc-ndc.usace.army.mil/ndc)

Note:

Coastwise applies to domestic traffic receiving a carriage over the ocean or between the Great Lakes ports and seacoast ports when having a carriage over the ocean. Lakewise applies to traffic between United States ports on the Great Lakes. Internal applies to traffic between ports or landings wherein the entire movement takes place on inland waterways. Local applies to movements of freight within the confines of a port.

^aDoes not include intra-territory tons.

^bCalculated as ton-miles divided by tons shipped.

^cNegligible.

According to the U.S. Coast Guard there are 4,800 more recreational boats in 2000 than in 1977. Even so, recreational boat fatalities are on the decline. There were only 5.5 fatalities per 100,000 boats in 2000.

Table 12.6
Recreational Boating Statistics, 1977–2000

U.S. Department of Transportation, United States Coast Guard, *Boating Statistics - 2000*, pp. 6, 23, and annual.

^aEnergy use estimated using the methodology developed by D.L. Greene in the report *Off-Highway Gasoline in the United States*, (DOT, FHWA, July 1986, p. 3–22) [0.95 x 205 gallons/boat x number of boats].

The Interstate Commerce Commission designates Class I railroads on the basis of annual gross revenues. In 2000, eight railroads were given this designation. The number of railroads designated as Class I has changed considerably in the last 25 years; in 1976 there were 52 railroads given Class I designation.

Table 12.7
Class I Railroad Freight Systems in the United States
Ranked by Revenue Ton-Miles, 2000

Railroad	Revenue ton-miles (billions)	Percent
Burlington Northern and Sante Fe Railway Company	492	33.6%
Union Pacific Railroad Company	485	33.1%
CSX Transportation	212	14.5%
Norfolk Southern Corporation	197	13.4%
Illinois Central Railroad Company	26	1.8%
Kansas City Southern Railway Company	20	1.4%
Soo Line Railroad Company	22	1.5%
Grand Trunk Western Railroad Inc.	11	0.8%
Total	1,465	100.0%

Source:

Association of American Railroads, *Railroad Facts*, 2001 Edition, Washington, DC, October 2001, p. 66. (Additional resources: www.aar.org)

Revenue ton-miles for Class I freight railroads was nearly 1.5 trillion in 2000. Though there are many regional and local freight railroads, the Class I freight railroads accounted for 91% of the railroad industry's freight revenue in 2000 and 71% of the industry's mileage operated..

Table 12.8
Summary Statistics for Class I Freight Railroads, 1970–2000

^aDoes not include self-powered units. From 1972 to 1979, the number of locomotives used in Amtrak passenger operations are subtracted from the total locomotives used in passenger and freight service to calculate the number of Class I locomotives in service.

^bDoes not include private or shipper-owned cars.

^cTons originated is a more accurate representation of total tonnage than revenue tons. Revenue tons often produces double-counting of loads switched between rail companies.

^dData represent total locomotives used in freight and passenger service. Separate estimates are not available.

The “other” category, which consists primarily of intermodal traffic, has grown 158% in carloads from 1974 to 2000. Coal now accounts for one quarter of all carloads.

Table 12.9
Railroad Revenue Carloads by Commodity Group, 1974 and 2000

The number of trailers and containers moved by railroads has increased more than four-fold from 1965 to 2000. Containerization has increased in recent years, evidenced by the 173% increase in the number of containers from 1988 to 2000. According to the 1997 Commodity Flow Survey, 5% of all freight ton-miles are rail intermodal shipments (truck/rail or rail/water). See Table 8.11 for details.

Table 12.10
Intermodal Rail Traffic, 1965–2000

Year	Trailers & containers	Trailers	Containers

^a Data are not available.

^b Energy use for 1994 on is not directly comparable to earlier years. Some commuter rail energy use may have been inadvertently included in earlier years.

Commuter rail, which is also known as regional rail or suburban rail, is long-haul rail passenger service operating between metropolitan and suburban areas, whether within or across state lines. Commuter rail lines usually have reduced fares for multiple rides and commutation tickets for regular, recurring riders.

Table 12.12
Summary Statistics for Commuter Rail Operations, 1984–2000

Year	Number of passenger vehicles	Vehicle- miles (millions)	Passenger trips (millions)	Passenger- miles (millions)	Average trip length (miles)	Energy intensity (Btu/ passenger- mile)	Energy use (trillion Btu)

This table on transit rail operations includes data on light rail and heavy rail systems. Light rail vehicles are usually single vehicles driven electrically with power drawn from overhead wires. Heavy rail is characterized by high speed and rapid acceleration of rail cars operating on a separate right-of-way.

Table 12.13
Summary Statistics for Rail Transit Operations, 1970–2000^a

(Additional resources: www.apta.com)

Energy use - See Appendix A for Rail Transit Energy Use.

^aHeavy rail and light rail. Series not continuous between 1983 and 1984 because of a change in data source by the American Public Transit Association (APTA). Beginning in 1984, data provided by APTA are taken from mandatory reports filed with the Urban Mass Transit Administration (UMTA). Data for prior years were provided on a voluntary basis by APTA members and expanded statistically.

^b1970–79 data represents total passenger rides; after 1979, data represents unlinked passenger trips.

^cEstimated for years 1970–76 based on an average trip length of 5.8 miles.

^dCalculated as the ratio of passenger-miles to passenger trips.

^eLarge system-to-system variations exist within this category.

^fData are not available.

^gAverage annual percentage change is calculated for years 1980–2000.

APPENDIX A

SOURCES & METHODOLOGIES

This appendix contains documentation of the estimation procedures used by ORNL. The reader can examine the methodology behind the estimates and form an opinion as to their utility. The appendix is arranged by subject heading. Only tables which contain ORNL estimations are documented in Appendix A; all other tables have sources listed at the bottom of the table. Since abbreviations are used throughout the appendix, a list of abbreviations is also included.

Contents of Appendix A

List of Abbreviations Used in Appendix A	A-2

Heat content used for conversion to btu:	64,600 btu/gallon	90,800 btu/gallon	91,300 btu/gallon	129,400 btu/gallon	125,000 btu/gallon	138,700 btu/gallon	11,765 btu/kWhr

Intercity and School:

Eno Transportation Foundation, *Transportation in America 2000*, Eighteenth Edition, 2001, Washington, DC, pp. 20–23. School bus fuel was assumed to be 90% diesel fuel and 10% gasoline based on estimates from the National Association of State Directors of Pupil Transportation Services. Intercity bus fuel was assumed to be 100% diesel. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

Table A.4
Intercity and School Bus Fuel Use

Year	Intercity (million gallons)	School (million gallons)
1970	305.34	299.88

Recreational Boating:

Fuel use by recreational boating from 1977-on was calculated using the methodology developed by D. L. Greene in the report, *Off-Highway Use of Gasoline in the United States* (DOT, FHWA, July 1986, p. 3-22). Results from Model 1 in the report indicated an average annual consumption of 205 gallons per boat. Total consumption in gallons was then calculated using the following equation: Total = 0.95 (Gal/boat) (number of boats). An estimate of number of recreational boats in operation is from the U.S. Coast Guard (numbered boats). Fuel use for recreational boating from 1970 to 1976 was from FHWA, *Highway Statistics, 1976*, Table MF-24, and annual editions 1970-75.

Table A11
Recreational Boating Fuel Use

Year	Number of numbered boats	Source	Estimated gasoline use (thousand gallons)
1970		FHWA, MF-24	598,000
1971		FHWA, MF-24	645,000

			btu/gallon

Pipeline

The sum of natural gas, crude petroleum and petroleum product, and coal slurry and water.

Natural Gas:

The amount of natural gas used to transport natural gas was defined as "pipeline fuel" as reported in DOE, EIA, *Natural Gas Annual 2000*, Table 1. Cubic feet were converted to Btu using 1,031 Btu/ft³. Electricity use was estimated using the following procedure as reported on p. 5-110 of J. N. Hooker et al., *End Use Energy Consumption DataBase: Transportation Sector*. The energy consumption of a natural gas pipeline was taken to be the energy content of the fuel used to drive the pumps. Some 94% of the installed pumping horsepower was supplied by natural gas. The remaining 6% of the horse power was generated more efficiently, mostly by electric motors. The energy consumed by natural gas pipeline pumps that were electrically powered was not known. In order to estimate the electricity consumed, the Btu of natural gas pipeline fuel consumed was multiplied by a factor of 0.015. From this computed value, electricity efficiency and generation loss must be taken into account. The electricity energy use in Btu must be converted to kWhr, using the conversion factor 29.305×10^{-5} kWhr/Btu. Electricity generation and distribution efficiency was 29%. When generation and distribution efficiency are taken into account, 1 kWhr equals 11,765 Btu.

Crude petroleum and petroleum product:

J. N. Hooker, *Oil Pipeline Energy Consumption and Efficiency*, ORNL-5697, ORNL, Oak Ridge, TN, 1981. (Data held constant; Latest available data.)

Coal slurry and water:

W. F. Banks, Systems, Science and Software, *Energy Consumption in the Pipeline Industry*, LaJolla, CA, October 1977. (Data held constant; Latest available data.)

Table A.12
Pipeline Fuel Use

Calculation of Million Barrels per Day Crude Oil Equivalent

One gallon of gasoline, diesel fuel, or lpg is estimated to be the equivalent of one gallon of crude oil. Petroleum used for electricity was calculated using the following formula:

$$(\{[(BTU*S)/G]/P \}/365)/1000$$

BTU = Btus of electricity from Table 2.4

S = Share of petroleum used in making primary electricity (Calculated from Table 2.6 from the EIA, *Monthly Energy Review*)

G = Electricity generation and distribution (assumed 29%)

P = Btus per barrel of petroleum product (Table A3 from the EIA, *Monthly Energy Review*).

Passenger Travel and Energy Use

Automobiles

Number of vehicles, vehicle-miles - DOT, FHWA, *Highway Statistics, 2000*, Table VM-1. Data series shown in Table 7.1.

Passenger-miles - Vehicle-miles multiplied by an average load factor.

Load factor - 1995 NPTS shows automobile load factor as 1.6 persons per vehicle.

Energy intensities -

Btu per vehicle-mile - Automobile energy use divided by vehicle-miles.

Btu per passenger-mile - Automobile energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-3. Data series shown in Table 2.6.

Light trucks

Number of vehicles, vehicle-miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1. Data by truck type were multiplied by the shares of trucks/truck travel which are for personal use (Table A16).

Passenger-miles - Vehicle-miles multiplied by an average load factor.

Load factor - 1995 NPTS shows personal light truck load factor as 1.6 persons per vehicle.

Energy intensities -

Btu per vehicle-mile - Personal light truck energy use divided by personal light truck vehicle-miles.

Btu per passenger-mile - Personal light truck energy use divided by personal light truck passenger-miles.

Energy use - See Energy Use Sources, p. A-6, A-7 (light trucks, medium/heavy trucks). Data by truck type were multiplied by the shares of truck fuel use which are for personal use (Table A17) which were derived by ORNL from the 1997 VIUS Micro Data File on CD.

Table A.17
Share of Trucks, Truck Travel,
and Fuel Use for Personal Travel

Personal trucks	
75.2%	2-axle, 4-tire trucks
16.9%	Other single-unit and combination trucks
Personal truck travel	
70.7%	2-axle, 4-tire trucks
7.1%	Other single-unit and combination trucks
Personal truck fuel use	
68.5%	2-axle, 4-tire trucks
3.7%	Other single-unit and combination trucks

Motorcycles

Number of vehicles, vehicle-miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1.

Passenger-miles - Vehicle-miles multiplied by an average load factor.

Load factor - 1995 NPTS shows motorcycle load factor as 1.2 persons per vehicle.

Energy intensities -

Btu per vehicle-mile - Motorcycle energy use divided by vehicle-miles.

Btu per passenger-mile - Motorcycle energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-4. Data series shown in Table 2.6.

Buses

Transit

Number of vehicles, vehicle miles, passenger miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 8.12.

Load factor - Passenger-miles divided by vehicle-miles.

Energy intensities -

Btu per vehicle-mile - Transit bus energy use divided by transit bus vehicle-miles.

Btu per passenger-mile - Transit bus energy use divided by transit bus passenger-miles.

Energy use - See Energy Use Sources, p. A-4. Data series shown in Table 8.12.

Intercity

Passenger-miles - Eno Foundation for Transportation, *Transportation in America 2000*, Eighteenth edition, Washington, DC. Data series shown in Table 8.13. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

Energy intensities -

Btu per passenger-mile - Intercity bus energy use divided by intercity bus passenger-miles.

Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 8.13. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

School

Number of vehicles - DOT, FHWA, *Highway Statistics 2000*, Table MV-10. Data series shown in Table 8.13.

Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 8.13. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

Air

Certificated air carriers

Aircraft-miles, passenger-miles - DOT, BTS, *Air Carrier Traffic Statistics Monthly, December 2001/2000*, Washington, DC.

Load factor - Passenger-miles divided by aircraft-miles.

Energy intensities -

Btu per passenger-mile - Certificated air carrier energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-10. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Note: These data differ from the data in Table 12.1 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Number of vehicles - DOT, FAA, *General Aviation Activity and Avionics Survey: Calendar Year 2000*. Data series shown in Table 12.2.

Passenger-miles - Eno Foundation for Transportation, *Transportation in America 2000*, Eighteenth edition, Washington, DC. Data series shown in Table 12.2.

Energy intensities -

Btu per passenger-mile - General aviation energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-9. Data series shown in Table 12.2.

Recreational boating

Number of vehicles - DOT, U.S. Coast Guard, Office of Boating Safety, Washington, DC, 2002.

Energy use - See Energy Use Sources, p. A-12.

Rail

Intercity

Number of vehicles, vehicle-miles, passenger-miles - AAR, *Railroad Facts, 2001 Edition*, Washington, DC, 2001.

Load factor - Passenger-miles divided by vehicle-miles.

Energy Intensities -

Btu per vehicle-mile - Intercity rail energy use divided by vehicle-miles.

Btu per passenger-mile - Intercity rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-18. Data series shown in Table 12.11.

Transit

Number of vehicles, vehicle-miles, passenger-miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Sum of light and heavy rail transit. Data series shown on Table 12.13.

Load factor - Passenger-miles divided by vehicle-miles.

Energy intensities -

Btu per vehicle-mile - Light and heavy transit rail energy use divided by vehicle-miles.

Btu per passenger-mile - Light and heavy transit rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-17. Data series shown in Table 12.13.

Commuter

Number of vehicles, vehicle-miles, passenger-miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 12.12.

Load factor - Passenger-miles divided by vehicle-miles.

Energy intensities -

Btu per vehicle-mile - Commuter rail energy use divided by vehicle-miles.

Btu per passenger-mile - Commuter rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-16. Data series shown in Table 12.12.

Highway Passenger Mode Energy Intensities

Automobiles

Btu per vehicle-mile - Automobile energy use divided by automobile vehicle miles of travel.

Energy use - See Energy Use Sources, p. A-3. Data series shown in Table 2.6.

Vehicle miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 7.1.

Btu per passenger-mile - Automobile energy use divided by automobile passenger-miles.

Energy use - See Energy Use Sources, p. A-3. Data series shown in Table 2.6.

Passenger miles - Vehicle miles multiplied by an average load factor.

Vehicle miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 7.1.

Load factor - NPTS 1969, 1977, 1983/84, 1990, and 1995.

Table A.18
Automobile Load Factor used to calculate Passenger-Miles

Year	Source	Load Factor
1970	1969 NPTS	1.90
1971	Interpolated	1.90
1972	Interpolated	1.90
1973	Interpolated	1.90
1974	Interpolated	1.90
1975	Interpolated	1.90
1976	Interpolated	1.90
1977	1977 NPTS	1.90
1978	Interpolated	1.88
1979	Interpolated	1.87
1980	Interpolated	1.85
1981	Interpolated	1.83
1982	Interpolated	1.82
1983	1983/84 NPTS	1.80
1984	Interpolated	1.77
1985	Interpolated	1.74
1986	Interpolated	1.71
1987	Interpolated	1.69
1988	Interpolated	1.66
1989	Interpolated	1.63
1990	1990 NPTS	1.60
1991	Interpolated	1.60
1992	Interpolated	1.60
1993	Interpolated	1.60
1994	Interpolated	1.60
1995	1995 NPTS	1.60
1996	1995 NPTS	1.60
1997	1995 NPTS	1.60
1998	1995 NPTS	1.60
1999	1995 NPTS	1.60
2000	1995 NPTS	1.60

Light trucks

Btu per vehicle-mile - Light truck energy use divided by light truck vehicle miles of travel.

Energy use - See Energy Use Sources, p. A-6. Data series shown in Table 2.6.

Vehicle miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 7.2.

Buses

Transit

Btu per vehicle-mile - Transit bus energy use divided by transit bus vehicle-miles.

Energy use - See Energy Use Sources, p. A-4. Data series shown in Table 8.12.

Vehicle miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 8.12.

Btu per passenger-mile - Transit bus energy use divided by transit bus passenger-miles.

Energy use - See Energy Use Sources, p. A-4. Data series shown in Table 8.12.

Passenger miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 8.12.

Intercity

Btu per passenger-mile - Intercity bus energy use divided by intercity bus passenger-miles.

Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 8.13. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

Passenger-miles - Eno Foundation for Transportation, *Transportation in America 2000*, Eighteenth edition, Washington, DC. Data series shown in Table 8.13. Because the 2000 data were not available at the time this report went to press, the 1999 data were used again for 2000.

Nonhighway Mode Energy Intensities

Air

Certificated air carriers

Btu per passenger-mile - Certificated air carrier energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-10. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Passenger-miles - DOT, BTS, *Air Carrier Traffic Statistics Monthly, December 2001/2000*, Washington, DC, and annual editions back to 1994. Pre-1994 data are from various editions of the *FAA Statistical Handbook of Aviation* (no longer published). Scheduled service passenger-miles of domestic air carriers and half of international air carriers were used to coincide with fuel use.

Note: These data differ from the data in Table 12.1 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Btu per passenger-mile - General aviation energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-9. Data series shown in Table 12.2.

Passenger-miles - Eno Foundation for Transportation, *Transportation in America 2000*, Eighteenth edition, Washington, DC. Data series shown in Table 12.2.

Rail

Intercity

Btu per passenger-mile - Intercity rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-18. Data series shown in Table 12.11.

Passenger-miles - AAR, *Railroad Facts, 2001 Edition*, and previous annual editions.

Transit

Btu per passenger-mile - Transit rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-17. Data series shown in Table 12.13.

Passenger-miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 12.13.

Commuter

Btu per passenger-mile - Commuter rail energy use divided by passenger-miles.

Energy use - See Energy Use Sources, p. A-16. Data series shown in Table 12.12.

Passenger-miles - APTA, *2002 Public Transportation Fact Book*, Washington, DC, 2002. Data series shown on Table 12.12.

Freight Movement and Energy Use

Truck

Number of vehicles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1. Data by truck type were multiplied by the shares of trucks engaged in intercity freight movement (Table A19).

Ton miles, tons shipped and average length of haul - Eno Transportation Foundation, *Transportation in America 2000*, Eighteenth Edition, Washington, DC, 2001.

Energy intensity - Freight truck energy use divided by ton-miles.

Energy use - See Energy Use Sources (light trucks, medium/heavy trucks), pp. A-6, A-7. Data by truck type were multiplied by the shares of trucks engaged in intercity freight movement (Table A19).

Table A.19
Share of Trucks and Truck Fuel Use
for Trucks Engaged in Intercity Freight Movement

Intercity freight trucks	
0.4%	2-axle, 4-tire trucks
29.0%	Other single-unit and combination trucks
Intercity freight truck fuel use	
1.0%	2-axle, 4-tire trucks
71.3%	Other single-unit and combination trucks

These percentages were derived by ORNL from the 1997 VIUS Micro Data File on CD. Intercity freight trucks were defined as any truck whose:

- greatest share of miles were traveled more than 50 miles away from the vehicle's home base;
- and**
- principal use was not personal or passenger transportation; **and**
- body type was not pickup, minivan, or utility vehicle.

Rail

Number of locomotives, ton-miles, tons shipped, average length of haul - AAR, *Railroad Facts, 2001 Edition*, Washington, DC, 2001. Data series shown in Table 12.8.

Energy intensity - Class I rail energy use divided by freight car-miles.

Energy use - See Energy Use Sources, p. A-15. Data series shown in Table 12.8.

Water

Number of vehicles - U.S. Department of the Army, Army Corps of Engineers, "Summary of U.S. Flag Passenger and Cargo Vessels, 2000," New Orleans, LA, 2001.

Ton-miles, tons shipped, average length of haul - U.S. Department of the Army, Army Corps of Engineers, *Waterborne Commerce of the United States, Calendar Year 2000*, Part 5: National Summaries, New Orleans, LA, 2001. Data series shown in Table 12.4.

Btu per ton-mile - Domestic waterborne commerce energy use divided by ton-miles.

Energy use - See Energy Use Sources, p. A-11. Data series shown in Table 12.4.

Freight Mode Energy Intensities

Truck

Btu per vehicle-mile - Heavy single-unit and combination truck energy use divided by vehicle miles

Energy use - See Energy Use Sources (medium/heavy trucks), p. A-7.

Vehicle-miles - DOT, FHWA, *Highway Statistics 2000*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series is the total of vehicle travel data on Tables 8.1 and 8.2.

Rail

Btu per freight car-mile - Class I rail energy use divided by freight car-miles.

Energy use - See Energy Use Sources, p. A-15. Data series shown in Table 12.8.

Freight car miles - AAR, *Railroad Facts, 2001 Edition*, Washington, DC, 2001. Data series shown in Table 12.8.

Btu per ton-mile - Class I rail energy use divided by ton-miles.

Energy use - See Energy Use Sources, p. A-15. Data series shown in Table 12.8.

Ton-miles - AAR, *Railroad Facts, 2001 Edition*, Washington, DC, 2001. Data series shown in Table 12.8.

Water

Btu per ton-mile - Domestic waterborne commerce energy use divided by ton-miles.

Energy use - See Energy Use Sources, p. A-11. Data series shown in Table 12.4.

Ton-miles - U.S. Department of the Army, Army Corps of Engineers, *Waterborne Commerce of the United States, Calendar Year 2000*, Part 5: National Summaries, New Orleans, LA, 2001. Data series shown in Table 12.4.

Highway Vehicle Stock and New Sales 2000 Calendar Year

Automobiles

Stock - Vehicle registrations by model year are from The Polk Company's National Vehicle Population Profile. Vehicles were distributed into size classes using the percentages in Table A20. This method assumed that all vehicles, large and small, were scrapped at the same rate. Shares were generated from the ORNL MPG and Market Shares Database, 2002.

Table A.20
Shares by Automobile Size Class and Model Year

Year	Minicompact	Subcompact	Compact	Midsize	Large	Two-seater	Total
Pre-1977	7.1%	22.0%	16.4%	29.5%	23.0%	2.0%	100.0%
1977	7.2%	16.2%	25.7%	21.7%	27.4%	1.8%	100.0%
1978	8.5%	19.0%	15.2%	33.0%	22.3%	2.0%	100.0%
1979	5.5%	30.7%	8.4%	33.8%	19.4%	2.2%	100.0%
1980	4.7%	37.8%	6.6%	33.8%	14.7%	2.4%	100.0%
1981	3.3%	33.0%	13.4%	35.1%	12.5%	2.7%	100.0%
1982	2.9%	31.4%	17.0%	33.1%	13.0%	2.6%	100.0%
1983	2.6%	26.8%	22.0%	31.7%	14.5%	2.4%	100.0%
1984	0.4%	24.6%	27.1%	30.0%	14.7%	3.2%	100.0%
1985	0.6%	21.7%	32.1%	28.4%	13.8%	3.4%	100.0%
1986	1.8%	22.4%	33.2%	26.9%	13.2%	2.5%	100.0%
1987	1.4%	19.5%	39.1%	25.2%	12.5%	2.3%	100.0%
1988	0.8%	19.1%	40.5%	24.6%	13.2%	1.8%	100.0%
1989	0.2%	19.3%	36.2%	28.9%	13.8%	1.6%	100.0%
1990	0.9%	22.0%	34.2%	27.2%	13.9%	1.8%	100.0%
1991	0.9%	26.1%	29.5%	27.9%	13.9%	1.7%	100.0%
1992	1.2%	25.3%	30.6%	27.7%	14.1%	1.1%	100.0%
1993	0.9%	22.6%	32.3%	29.1%	14.2%	0.9%	100.0%
1994	0.5%	22.1%	35.2%	26.5%	14.9%	0.8%	100.0%
1995	0.5%	17.4%	37.8%	28.6%	15.1%	0.6%	100.0%
1996	0.4%	15.2%	40.3%	28.8%	14.6%	0.7%	100.0%
1997	0.5%	18.3%	35.5%	30.6%	14.1%	1.0%	100.0%
1998	0.2%	18.5%	28.6%	38.4%	13.0%	1.3%	100.0%
1999	0.1%	18.8%	27.4%	38.8%	13.7%	1.2%	100.0%
2000	0.2%	19.9%	26.7%	37.4%	14.4%	1.4%	100.0%

Business fleet autos - Bobit Publishing Company, Automotive Fleet Research Department,
Automotive Fleet Factbook 2001, Redondo Beach, CA, 2000.

Personal autos - Difference between total vehicle stock and business fleet autos.

Sales - Domestic and import totals are from *Ward's Motor Vehicle Facts and Figures 2001*. Domestic-sponsored imports (captive imports) were included in the import figure only. Domestic and import sales were distributed into size classes using the percentages in Table A21 from the ORNL MPG and Market Shares Database, 2002.

Table A.21
Automobile Sales Shares by Size Class, 2000

Size class	Domestic	Import
Two-seaters	0.8%	3.4%
Minicompact	0.0%	1.0%
Subcompact	21.5%	14.6%
Compact	23.8%	36.7%
Midsized	35.9%	42.4%
Large	18.0%	2.0%

See Glossary for definition of Automobile Size Classifications.

Trucks

Stock - Total truck population from The Polk Company, 2001. The trucks were distributed using shares of trucks by standard weight classes from VIUS 1997 (Table A22).

Table A.22
Share of Trucks by Weight Class

Weight classes	Share of trucks in the population
0 - 10,000 lbs	93.5%
10,001-19,500 lbs	2.0%
19,501-26,000 lbs	1.0%
26,001 lbs and over	3.5%
Total	100.0%

Then, the number of trucks in Class 2b were split from Classes 1 and 2 by model year (Polk NVPP data) using shares from ORNL's Class 2b study (Table A23).

Table A.23
Share of Class 1 and 2 Trucks
that are Class 2b Trucks (8,500-10,000 lbs)

Model Year	Share of class 2b trucks
Pre-1974	7.35%
1974	15.64%
1975	17.15%
1976	18.29%
1977	14.60%
1978	17.90%
1979	17.79%
1980	18.20%
1981	13.87%
1982	14.05%
1983	8.13%
1984	9.74%
1985	9.56%
1986	8.77%
1987	8.91%
1988	6.90%
1989	8.34%
1990	6.73%
1991	4.91%
1992	5.04%
1993	5.60%
1994	5.60%
1995	7.05%
1996	6.71%
1997	7.86%
1998	5.01%
1999	9.36%
2000	8.94%
2001	8.61%

Trucks less than 8,500 lbs (Classes 1 and 2a) were distributed into size classes using the percentages in Table A24. This method assumed that all vehicles, large and small, were scrapped at the same rate. Shares were generated from the ORNL MPG and Market Shares Database, 2002.

Table A.24
Shares by Light Truck Size Class and Model Year for Trucks under 8,500 lbs

Sales period	Small pickup	Large pickup	Small van	Large van	Small utility	Medium utility	Large utility	Total
Pre-1976	9.5%	66.1%	0.9%	21.1%	0.0%	2.0%	0.4%	100.0%
1976	7.1%	65.7%	0.8%	23.9%	0.0%	2.1%	0.4%	100.0%
1977	11.0%	68.5%	1.0%	16.6%	0.0%	2.5%	0.4%	100.0%
1978	10.5%	64.0%	0.8%	22.8%	0.1%	1.4%	0.4%	100.0%
1979	16.1%	58.5%	0.6%	20.7%	1.8%	1.9%	0.4%	100.0%
1980	23.3%	50.3%	0.6%	14.8%	2.3%	6.9%	1.8%	100.0%
1981	24.4%	50.0%	0.6%	16.9%	2.0%	4.7%	1.4%	100.0%
1982	27.2%	46.8%	0.6%	17.8%	1.3%	4.8%	1.5%	100.0%
1983	33.3%	35.7%	0.5%	18.0%	6.3%	4.5%	1.7%	100.0%
1984	23.7%	38.1%	6.2%	15.1%	10.6%	4.4%	1.9%	100.0%
1985	20.4%	40.0%	10.3%	12.7%	10.4%	4.4%	1.8%	100.0%
1986	21.7%	35.2%	14.1%	11.3%	11.7%	4.1%	1.9%	100.0%
1987	21.2%	33.7%	16.0%	10.3%	12.3%	4.8%	1.7%	100.0%
1988	21.6%	30.6%	18.0%	10.3%	12.5%	4.9%	2.1%	100.0%
1989	18.4%	33.2%	18.0%	9.9%	9.8%	8.6%	2.1%	100.0%
1990	25.2%	24.7%	22.4%	7.1%	8.9%	9.6%	2.1%	100.0%
1991	24.8%	23.1%	23.4%	6.1%	8.6%	12.2%	1.8%	100.0%
1992	22.8%	23.6%	23.6%	6.4%	8.7%	13.3%	1.6%	100.0%
1993	21.6%	22.2%	23.8%	6.2%	8.2%	15.5%	2.5%	100.0%
1994	20.3%	24.5%	23.6%	5.6%	7.6%	16.0%	2.4%	100.0%
1995	18.0%	24.9%	22.4%	5.5%	8.6%	18.1%	2.5%	100.0%
1996	16.2%	25.7%	21.0%	4.7%	9.3%	20.4%	2.7%	100.0%
1997	15.0%	24.3%	19.9%	4.7%	5.4%	22.2%	8.5%	100.0%
1998	12.5%	27.4%	17.8%	4.6%	6.8%	22.2%	8.7%	100.0%
1999	13.9%	25.3%	17.1%	4.5%	8.3%	22.0%	8.9%	100.0%
2000	12.9%	23.7%	15.3%	4.4%	9.1%	26.1%	8.5%	100.0%

The Class 2b trucks were split into two truck types - pickups and van/SUV using shares from the report *Investigation of Class 2b Trucks*, ORNL/TM-2002/49, Table 11, which are shown here in Table A25.

Table A.25
Shares of Class 2b Trucks by Truck Type

Truck types	Shares of class 2b truck population
Pickup	73.7%
Van/SUV	26.3%

Business fleet trucks - Bobit Publishing Company, Automotive Fleet Research Department, *Automotive Fleet Factbook 2000*, Redondo Beach, CA, 2001.

Personal trucks - Difference between total stock and business fleet trucks.

Sales - Domestic and import totals are from *Ward's Motor Vehicle Facts and Figures 2001*. Domestic-sponsored imports (captive imports) were included in the import figure only.

According to the *Investigation of Class 2b Trucks*, ORNL/TM-2002/49, 6.5% of all classes 1 and 2 truck sales were Class 2b trucks. Also, there were no class 2b trucks which were imported into the U.S. in 2000.

Domestic and import sales of trucks less than 8,500 lbs were distributed into size classes using the percentages in Table A26 from the ORNL MPG and Market Shares Database, 2002.

Table A.26
Light Truck Sales Shares by Size Class, 2000
for Trucks less than 8,500 lbs

Size class	Domestic	Import
Small pickup	14.4%	0.0%
Large pickup	26.4%	0.0%
Small van	16.5%	4.9%
Large van	4.9%	0.0%
Small SUV	5.9%	37.9%
Medium SUV	23.1%	52.4%
Large SUV	8.9%	4.8%

The Class 2b truck sales were split into two truck types - pickups and van/SUV using shares from the report *Investigation of Class 2b Trucks*, ORNL/TM-2002/49, Table 6, which are shown here in Table A27.

Table A.27
Shares of Class 2b Truck Sales
by Truck Type, 2000

Truck types	Shares of class 2b truck population
Pickup	82.1%
Van/SUV	17.9%

Fleet Vehicle Data

Light Fleet Vehicle Population

Automobiles - Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p. 12. Fleets of 10 or more units. Taxi and Rental categories were considered Business fleets.

Light trucks - Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p. 12. Trucks under 19,501 lbs GVW in fleets of 10 or more units. Light trucks were split from the total using shares from the 1997 VIUS (business, rental, and utility) and the GSA *Federal Fleet Factbook* (government) shown in Table A28.

Table A.28
Light Truck Share of Fleet Trucks
Less than 19,501 lbs GVW

Vehicles in Fleets of 10 or more	
Business	92.1%
Utility	89.6%
Rental	97.3%
Federal Government	81.6%

Light Fleet Vehicle New Sales

Automobiles - Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p. 40–48, Fleet 2000 Model Year registrations. New registrations are considered a proxy for new vehicle sales. Commercial and rental categories were considered Business fleets. Utility fleets were estimated as share of business fleet purchases based on data from the National Association of Fleet Administrators shown in Table A29.

Light trucks - Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p. 48–52, Fleet 2000 Model Year registrations. New registrations are considered a proxy for new vehicle sales. Commercial and rental categories were considered Business fleets. Utility fleets were estimated as a share of business fleet purchases based on data from the National Association of Fleet Administrators shown in Table A29.

Table A.29
Share of Business Fleet Vehicles
which are Utility Fleet Vehicles

Vehicle type	
Automobiles	2.6%
Passenger vans	7.3%
Cargo vans	64.3%
Sport utility vehicles	14.8%
Pickup trucks	66.2%

Light Fleet Vehicle Travel

Automobiles

Business

Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p.58-67. Average annual miles of compact and intermediate size automobiles were based on data from four leading fleet management companies. Weighted average of automobile travel was derived based on the estimated share of vehicles in the population from The Polk Company. Compact autos and smaller were assumed to travel as compact cars. Intermediate autos and larger were assumed to travel like intermediate autos. Average annual miles and weights are shown in Table A30.

Government

The only source of data on government fleet travel was for the Federal Government fleet vehicles. Data on sedans and station wagons from the GSA *Federal Fleet Factbook* was used for government fleet travel and is shown in Table A30.

Utility

The only source of data available on utility fleet vehicle travel was for the fleets of the Tennessee Valley Authority (TVA). Data on the TVA automobile fleet from the GSA *Federal Fleet Factbook* was used for utility fleet travel and is shown in Table A30.

Table A.30
Average Annual Miles and Population Shares
of Fleet Automobiles

	Average annual miles, 2000	Estimated share of vehicles in the population, 2000
Business automobiles		
Compact	22,689	55.6%
Intermediate	22,893	44.4%
Government automobiles		
Sedans and station wagons	12,895	
Utility automobiles		
Sedans and station wagons	13,399	

Light trucks

Business

Bobit Publishing Company, *Automotive Fleet Factbook 2001*, Redondo Beach, CA, 2002, p.58-67. Average annual miles of pickups, minivans, sport utility vehicles and full-size vans were based on data from four leading fleet management companies. Weighted average of light truck travel was derived based on the estimated share of vehicles in the population from The Polk Company. Average annual miles and weights are shown in Table A31.

Government

The only source of data on government fleet travel was for the Federal Government fleet vehicles. Data on ambulances, 2x4 trucks, and 4x4 trucks from the GSA *Federal Fleet Factbook* were used for government fleet travel. Weighted average of light truck travel was derived based on the estimated share of vehicles in the population from the same GSA report. Average annual miles and weights are shown in Table A31.

Utility

The only source of data available on utility fleet vehicle travel was for the fleets of the Tennessee Valley Authority (TVA). Data on the 2x4 trucks and 4x4 trucks in the TVA fleet from the GSA *Federal Fleet Factbook* were used for utility fleet travel. The weighted average of travel was derived based on the share of vehicles in the population from the same GSA report. Average annual miles and weights are shown in Table A31.

Table A.31
Average Annual Miles and Population Shares
of Fleet Light Trucks

	Average annual miles, 2000	Estimated share of vehicles in the population, 2000
Business light trucks		
Pickup trucks	28,515	48.8%
Minivans	25,677	17.1%
Sport utility vehicles	24,003	28.4%
Full-size vans	20,412	5.8%
Government light trucks		
Ambulances	5,946	0.5%
2x4 trucks	5,747	82.8%
4x4 trucks	12,022	16.7%
Utility light trucks		
2x4 trucks	10,405	55.5%
4x4 trucks	14,208	44.5%

APPENDIX B

CONVERSIONS

A Note About Heating Values

The heat content of a fuel is the quantity of energy released by burning a unit amount of that fuel. However, this value is not absolute and can vary according to several factors. For example, empirical formulae for determining the heating value of liquid fuels depend on the fuels' American Petroleum Institute (API) gravity. The API gravity varies depending on the percent by weight of the chemical constituents and impurities in the fuel, both of which are affected by the combination of raw materials used to produce the fuel and by the type of manufacturing process. Temperature and climatic conditions are also factors.

Because of these variations, the heating values in Table B.1 may differ from values in other publications. The figures in this report are representative or average values, not absolute ones. The gross heating values used here agree with those used by the Energy Information Administration (EIA).

Heating values fall into two categories, gross and net. If the products of fuel combustion are cooled back to the initial fuel-air or fuel-oxidizer mixture temperature and the water formed during combustion is condensed, the energy released by the process is the higher (gross) heating value. If the products of combustion are cooled to the initial fuel-air temperature, but the water is considered to remain as a vapor, the energy released by the process is lower (net) heating value. Usually the difference between the gross and net heating values for fuels used in transportation is around 5 to 8 percent; however, it is important to be consistent in their use.

Table B.1
Approximate Heat Content for Various Fuels

Automotive gasoline	125,000 Btu/gal(gross) = 115,400 Btu/gal(net)
Diesel motor fuel	138,700 Btu/gal (gross) = 128,700 Btu/gal (net)
Biodiesel	126,206 Btu/gal (gross) = 117,093 Btu/gal (net)
Methanol	64,600 Btu/gal (gross) = 56,560 Btu/gal (net)
Ethanol	84,600 Btu/gal (gross) = 75,670 Btu/gal (net)
Gasohol	120,900 Btu/gal (gross) = 112,417 Btu/gal (net)
Aviation gasoline	120,200 Btu/gal (gross) = 112,000 Btu/gal (net)
Propane	91,300 Btu/gal (gross) = 83,500 Btu/gal (net)
Butane	103,000 Btu/gal (gross) = 93,000 Btu/gal (net)
Jet fuel (naphtha)	127,500 Btu/gal (gross) = 118,700 Btu/gal (net)
Jet fuel (kerosene)	135,000 Btu/gal (gross) = 128,100 Btu/gal (net)
Lubricants	144,400 Btu/gal (gross) = 130,900 Btu/gal (net)
Waxes	131,800 Btu/gal (gross) = 120,200 Btu/gal (net)
Asphalt and road oil	158,000 Btu/gal (gross) = 157,700 Btu/gal (net)
Petroleum coke	143,400 Btu/gal (gross) = 168,300 Btu/gal (net)
Natural gas	
Wet	1,109 Btu/ft ³
Dry	1,027 Btu/ft ³
Compressed	20,551 Btu/pound
	960 Btu/cubic foot
Liquid	90,800 Btu/gal (gross) = 87,600 Btu/gal (net)
Crude petroleum	138,100 Btu/gal (gross) = 131,800 Btu/gal (net)
Fuel Oils	
Residual	149,700 Btu/gal (gross) = 138,400 Btu/gal (net)
Distillate	138,700 Btu/gal (gross) = 131,800 Btu/gal (net)
Coal	
Anthracite - Consumption	21.711 x 10 ⁶ Btu/short ton
Bituminous and lignite - Consumption	21.012 x 10 ⁶ Btu/short ton
Production average	21.352 x 10 ⁶ Btu/short ton
Consumption average	21.015 x 10 ⁶ Btu/short ton

Mass; payload	kilogram	kg
Length; width	meter	m
Brake specific fuel consumption	kilogram/joule	kg/J
Fuel economy (heat engine)	liters/100 km	L/100 km

Conversion of Constant Dollar Values

Many types of information in this data book are expressed in dollars. Generally, constant dollars are used--that is, dollars of a fixed value for a specific year, such as 1990 dollars. Converting current dollars to constant dollars, or converting constant dollars for one year to constant dollars for another year, requires conversion factors (Table B.13 and B.14). Table B.13 shows conversion factors for the Consumer Price Index inflation factors. Table B.14 shows conversion factors using the Gross National Product inflation factors.

Due to the size of the tables, the data in Tables B.13 and B.14 were changed to two decimal places starting with Edition 17 and data for years 1971–74 were taken off in Edition 21. However, three decimal places were used to calculate all constant dollar values.

Table B.13

GLOSSARY

Acceleration power - Measured in kilowatts. Pulse power obtainable from a battery used to accelerate a vehicle. This is based on a constant current pulse for 30 seconds at no less than 2/3 of the maximum open-circuit-voltage, at 80% depth-of-discharge relative to the battery's rated capacity and at 20° C ambient temperature.

Air Carrier - The commercial system of air transportation consisting of certificated air carriers, air taxis (including commuters), supplemental air carriers, commercial operators of large aircraft, and air travel clubs.

Certificated route air carrier: An air carrier holding a Certificate of Public Convenience and Necessity issued by the Department of Transportation to conduct scheduled interstate services. Nonscheduled or charter operations may also be conducted by these carriers. These carriers operate large aircraft (30 seats or more, or a maximum payload capacity of 7,500 pounds or more) in accordance with Federal Aviation Regulation part 121.

Domestic air operator: Commercial air transportation within and between the 50 States and the District of Columbia. Includes operations of certificated route air carriers, Pan American, local service, helicopter, intra-Alaska, intra-Hawaii, all-cargo carriers and other carriers. Also included are transborder operations conducted on the domestic route segments of U.S. air carriers. Domestic operators are classified based on their operating revenue as follows:

- Majors - over \$1 billion
- Nationals - \$100-1,000 million
- Large Regionals - \$10-99.9 million
- Medium Regionals - \$0-9.99 million

International air operator: Commercial air transportation outside the territory of the United States, including operations between the U.S. and foreign countries and between the U.S. and its territories and possessions.

Supplemental air carrier: A class of air carriers which hold certificates authorizing them to perform passenger and cargo charter services supplementing the scheduled service of the certificated route air carriers. Supplemental air carriers are often referred to as nonscheduled air carriers or "nonskeds."

Alcohol - The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Amtrak - See *Rail*.

Anthropogenic - Human made. Usually used in the context of emissions that are produced as the result of human activities.

Automobile size classifications - Size classifications of automobiles are established by the Environmental Protection Agency (EPA) as follows:

Minicompact - less than 85 cubic feet of passenger and luggage volume.

Subcompact - between 85 to 100 cubic feet of passenger and luggage volume.

Compact - between 100 to 110 cubic feet of passenger and luggage volume.

Midsize - between 110 to 120 cubic feet of passenger and luggage volume.

Large - more than 120 cubic feet of passenger and luggage volume.

Two seater - automobiles designed primarily to seat only two adults.

Station wagons are included with the size class for the sedan of the same name.

Aviation - See *General aviation*.

Aviation gasoline - All special grades of gasoline for use in aviation reciprocating engines, as given in the American Society for Testing and Materials (ASTM) Specification D 910. Includes all refinery products within the gasoline range that are to be marketed straight or in blends as aviation gasoline without further processing (any refinery operation except mechanical blending). Also included are finished components in the gasoline range which will be used for blending or compounding into aviation gasoline.

Barges - Shallow, nonself-propelled vessels used to carry bulk commodities on the rivers and the Great Lakes.

Battery efficiency - Measured in percentage. Net DC energy delivered on discharge, as a percentage of the total DC energy required to restore the initial state-of-charge. The efficiency value must include energy losses resulting from self-discharge, cell equalization, thermal loss compensation, and all battery-specific auxiliary equipment.

Btu - British thermal unit. The amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit at or near 39.2 degrees Fahrenheit. An average Btu content of fuel is the heat value per quantity of fuel as determined from tests of fuel samples.

Bunker - A storage tank.

Bunkering fuels - Fuels stored in ship bunkers.

Bus -

Intercity bus: A standard size bus equipped with front doors only, high backed seats, luggage compartments separate from the passenger compartment and usually with restroom facilities, for high-speed long distance service.

Motor bus: Rubber-tired, self-propelled, manually-steered bus with fuel supply on board the vehicle. Motor bus types include intercity, school, and transit.

School and other nonrevenue bus: Bus services for which passengers are not directly charged for transportation, either on a per passenger or per vehicle basis.

Transit bus: A bus designed for frequent stop service with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage storage compartments or restroom facilities.

Trolley coach: Rubber-tired electric transit vehicle, manually-steered, propelled by a motor drawing current, normally through overhead wires, from a central power source not on board the vehicle.

Calendar year - The period of time between January 1 and December 31 of any given year.

Captive imports - Products produced overseas specifically for domestic manufacturers.

Carbon dioxide (CO₂) - A colorless, odorless, non-poisonous gas that is a normal part of the ambient air. Carbon dioxide is a product of fossil fuel combustion.

Carbon monoxide (CO) - A colorless, odorless, highly toxic gas that is a by-product of incomplete fossil fuel combustion. Carbon monoxide, one of the major air pollutants, can be harmful in small amounts if breathed over a certain period of time.

Car-mile (railroad) - A single railroad car moved a distance of one mile.

Cargo ton-mile - See *Ton-mile*.

Certificated route air carriers - See *Air carriers*.

Class I freight railroad - See *Rail*.

Coal slurry - Finely crushed coal mixed with sufficient water to form a fluid.

Combination trucks - Consist of a power unit (a truck tractor) and one or more trailing units (a semi-trailer or trailer). The most frequently used combination is popularly referred to as a "tractor-semitrailer" or "tractor trailer".

Commercial sector - An energy-consuming sector that consists of service-providing facilities of: businesses; Federal, State, and local governments; and other private and public organizations, such as religious, social or fraternal groups. Includes institutional living quarters.

Commuter railroad - See *Rail*.

Compact car - See *Automobile size classifications*.

Constant dollars - A time series of monetary figures is expressed in constant dollars when the effect of change over time in the purchasing power of the dollar has been removed. Usually the data are expressed in terms of dollars of a selected year or the average of a set of years.

Consumer Price Index (CPI) - An index issued by the U.S. Department of Labor, Bureau of Labor Statistics. The CPI is designed to measure changes in the prices of goods and services bought by wage earners and clerical workers in urban areas. It represents the cost of a typical consumption bundle at current prices as a ratio to its cost at a base year.

Continuous discharge capacity - Measured as percent of rated energy capacity. Energy delivered in a constant power discharge required by an electric vehicle for hill climbing and/or high-speed cruise, specified as the percent of its rated energy capacity delivered in a one hour constant-power discharge.

Corporate Average Fuel Economy (CAFE) standards - CAFE standards were originally established by Congress for new automobiles, and later for light trucks, in Title V of the Motor Vehicle Information and Cost Savings Act (15 U.S.C.1901, et seq.) with subsequent amendments. Under CAFE, automobile manufacturers are required by law to produce vehicle fleets with a composite sales-weighted fuel economy which cannot be lower than the CAFE standards in a given year, or for every vehicle which does not meet the standard, a fine of \$5.00 is paid for every one-tenth of a mpg below the standard.

Crude oil - A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Crude oil imports - The volume of crude oil imported into the 50 States and the District of Columbia, including imports from U.S. territories, but excluding imports of crude oil into the Hawaiian Foreign Trade Zone.

Curb weight - The weight of a vehicle including all standard equipment, spare tire and wheel, all fluids and lubricants to capacity, full tank of fuel, and the weight of major optional accessories normally found on the vehicle.

Current dollars - Represents dollars current at the time designated or at the time of the transaction. In most contexts, the same meaning would be conveyed by the use of the term "dollars." See also constant dollars.

Diesel fuel - See distillate fuel oil.

Disposable personal income - See *Income*.

Distillate fuel oil - The lighter fuel oils distilled off during the refining process. Included are products known as ASTM grades numbers 1 and 2 heating oils, diesel fuels, and number 4 fuel oil. The major uses of distillate fuel oils include heating, fuel for on-and off-highway diesel engines, and railroad diesel fuel.

Domestic air operator - See *Air carrier*.

E85 - 85% ethanol and 15% gasoline.

E95 - 95% ethanol and 5% gasoline.

Domestic water transportation - See *Internal water transportation*.

Electric utilities sector - Consists of privately and publicly owned establishments which generate electricity primarily for resale.

Emission standards - Standards for the levels of pollutants emitted from automobiles and trucks. Congress established the first standards in the Clean Air Act of 1963. Currently, standards are set for four vehicle classes - automobiles, light trucks, heavy-duty gasoline trucks, and heavy-duty diesel trucks.

Energy capacity - Measured in kilowatt hours. The energy delivered by the battery, when tested at C/3 discharge rate, up to termination of discharge specified by the battery manufacturer. The required acceleration power must be delivered by the battery at any point up to 80% of the battery's energy capacity rating.

Energy efficiency - In reference to transportation, the inverse of energy intensiveness: the ratio of outputs from a process to the energy inputs; for example, miles traveled per gallon of fuel (mpg).

Energy intensity - In reference to transportation, the ratio of energy inputs to a process to the useful outputs from that process; for example, gallons of fuel per passenger-mile or Btu per ton-mile.

Ethanol (C₂H₅OH) - Otherwise known as ethyl alcohol, alcohol, or grain-spirit. A clear, colorless, flammable oxygenated hydrocarbon with a boiling point of 78.5 degrees Celsius in the anhydrous state. In transportation, ethanol is used as a vehicle fuel by itself (E100 – 100% ethanol by volume), blended with gasoline (E85 – 85% ethanol by volume), or as a gasoline octane enhancer and oxygenate (10% by volume).

Fixed operating cost - See *Operating cost*.

Fleet vehicles -

Private fleet vehicles: Ideally, a vehicle could be classified as a member of a fleet if it is:

- a) operated in mass by a corporation or institution,
- b) operated under unified control, or
- c) used for non-personal activities.

However, the definition of a fleet is not consistent throughout the fleet industry. Some companies make a distinction between cars that were bought in bulk rather than singularly, or whether they are operated in bulk, as well as the minimum number of vehicles that constitute a fleet (i.e. 4 or 10).

Government fleet vehicles: Includes vehicles owned by all Federal, state, county, city, and metro units of government, including toll road operations.

Foreign freight - Movements between the United States and foreign countries and between Puerto Rico, the Virgin Islands, and foreign countries. Trade between U.S. territories and possessions (e.g. Guam, Wake, American Samoa) and foreign countries is excluded. Traffic to or from the Panama Canal Zone is included.

Gas Guzzler Tax - Originates from the 1978 Energy Tax Act (Public Law 95-618). A new car purchaser is required to pay the tax if the car purchased has a combined city/highway fuel economy rating that is below the standard for that year. For model years 1986 and later, the standard is 22.5 mpg.

Gasohol - A mixture of 10% anhydrous ethanol and 90% gasoline by volume; 7.5% anhydrous ethanol and 92.5% gasoline by volume; or 5.5% anhydrous ethanol and 94.5% gasoline by

volume. There are other fuels that contain methanol and gasoline, but these fuels are not referred to as gasohol.

Gasoline - See *Motor gasoline*.

General aviation - That portion of civil aviation which encompasses all facets of aviation except air carriers. It includes any air taxis, commuter air carriers, and air travel clubs which do not hold Certificates of Public Convenience and Necessity.

Gross National Product - A measure of monetary value of the goods and services becoming available to the nation from economic activity. Total value at market prices of all goods and services produced by the nation's economy. Calculated quarterly by the Department of Commerce, the Gross National Product is the broadest available measure of the level of economic activity.

Gross vehicle weight (gvw) - The weight of the empty truck plus the maximum anticipated load weight.

Gross vehicle weight rating (gvwr) - The gross vehicle weight which is assigned to each new truck by the manufacturer. This rating may be different for trucks of the same model because of certain features, such as heavy-duty suspension. Passenger cars do not have gross vehicle weight ratings.

Heavy-heavy truck - See *Truck size classifications*.

Household - Consists of all persons who occupy a housing unit, including the related family members and all unrelated persons, if any, who share the housing unit.

Housing unit - A house, apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hallway intended to be used by the occupants of another unit or by the general public, or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

Hydrocarbon (HC) - A compound that contains only hydrogen and carbon. The simplest and lightest forms of hydrocarbon are gaseous. With greater molecular weights they are liquid, while the heaviest are solids.

Income -

Disposable personal income: Personal income less personal tax and non-tax payments.

National income: The aggregate earnings of labor and property which arise in the current production of goods and services by the nation's economy.

Personal income: The current income received by persons from all sources, net of contributions for social insurance.

Industrial sector - Construction, manufacturing, agricultural and mining establishments.

Inertia weight - The curb weight of a vehicle plus 300 pounds.

Intercity bus - See *Bus*.

Internal water transportation - Includes all local (intraport) traffic and traffic between ports or landings wherein the entire movement takes place on inland waterways. Also termed internal are movements involving carriage on both inland waterways and the water of the Great Lakes, and inland movements that cross short stretches of open water that link inland systems.

International air operator - See *Air carrier*.

International freight - See *Foreign freight*.

Jet fuel - Includes both naphtha-type and kerosene-type fuels meeting standards for use in aircraft turbine engines. Although most jet fuel is used in aircraft, some is used for other purposes such as generating electricity in gas turbines.

Kerosene-type jet fuel: A quality kerosene product with an average gravity of 40.7 degrees API and 10% to 90% distillation temperatures of 217 to 261 degrees centigrade. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. It is a relatively low freezing point distillate of the kerosene type.

Naphtha-type jet fuel: A fuel in the heavy naphtha boiling range with an average gravity of 52.8 degrees API and 10% to 90% distillation temperatures of 117 to 233 degrees centigrade used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum.

Kerosene - A petroleum distillate in the 300 to 500 degrees Fahrenheit boiling range and generally having a flash point higher than 100 degrees Fahrenheit by the American Society of Testing and Material (ASTM) Method D56, a gravity range from 40 to 46 degrees API, and a burning point in the range of 150 to 175 degrees Fahrenheit. It is a clean-burning product suitable for use as an illuminant when burned in wick lamps. Includes grades of kerosene called range oil having properties similar to Number 1 fuel oil, but with a gravity of about 43 degrees API and an end point of 625 degrees Fahrenheit. Used in space heaters, cooking stoves, and water heaters.

Kerosene-type jet fuel - See *Jet fuel*.

Large car - See *Automobile size classifications*.

Lease Condensate - A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Light duty vehicles - Automobiles and light trucks combined.

Light truck - Unless otherwise noted, light trucks are defined in this publication as two-axle, four-tire trucks. The U.S. Bureau of Census classifies all trucks with a gross vehicle weight less than 10,000 pounds as light trucks (See *Truck size classifications*).

Light-heavy truck - See *Truck size classifications*.

Liquefied petroleum gas (lpg) - Consists of propane and butane and is usually derived from natural gas. In locations where there is no natural gas and the gasoline consumption is low, naphtha is converted to lpg by catalytic reforming.

Load factor - Total passenger miles divided by total vehicle miles.

Low emission vehicle - Any vehicle certified to the low emission standards which are set by the Federal government and/or the state of California.

M85 - 85% methanol and 15% gasoline.

M100 - 100% methanol.

Medium truck - See *Truck size classifications*.

Methanol (CH₃OH) - A colorless highly toxic liquid with essentially no odor and very little taste. It is the simplest alcohol and boils at 64.7 degrees Celsius. In transportation, methanol is used as a vehicle fuel by itself (M100), or blended with gasoline (M85).

Midsize car - See *Automobile size classifications*.

Minicompact car - See *Automobile size classifications*.

Model year - In this publication, model year is referring to the "sales" model year, the period from October 1 to the next September 31.

Motor bus - See *Bus*.

Motor Gasoline - A mixture of volatile hydrocarbons suitable for operation of an internal combustion engine whose major components are hydrocarbons with boiling points ranging from 78 to 217 degrees centigrade and whose source is distillation of petroleum and cracking, polymerization, and other chemical reactions by which the naturally occurring petroleum hydrocarbons are converted into those that have superior fuel properties.

MTBE - Methyl Tertiary Butyl Ether - a colorless, flammable, liquid oxygenated hydrocarbon containing 18.15 percent oxygen.

Naphtha-type jet fuel - See *Jet fuel*.

National income - See *Income*.

Nationwide Personal Transportation Survey (NPTS) - A nationwide survey of households that provides information on the characteristics and personal travel patterns of the U.S. population. Surveys were conducted in 1969, 1977, 1983, 1990, and 1995 by the U.S. Bureau of Census for the U.S. Department of Transportation.

Natural gas - A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.

Natural gas, dry: Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream; and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute.

Natural gas, wet: The volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volumes of natural gas, wet after lease separation, at natural gas processing plants.

Natural gas plant liquids - Natural gas liquids recovered from natural gas in processing plants and from natural gas field facilities and fractionators. Products obtained include ethane, propane, normal butane, isobutane, pentanes plus, and other products from natural gas processing plants.

Nitrogen oxides (NO_x) - A product of combustion of fossil fuels whose production increases with the temperature of the process. It can become an air pollutant if concentrations are excessive.

Oil Stocks - Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products.

Operating cost -

Fixed operating cost: In reference to passenger car operating cost, refers to those expenditures that are independent of the amount of use of the car, such as insurance costs, fees for license and registration, depreciation and finance charges.

Variable operating cost: In reference to passenger car operating cost, expenditures which are dependent on the amount of use of the car, such as the cost of gas and oil, tires, and other maintenance.

Organization for Economic Cooperation and Development (OECD) - Consists of Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe: Consists of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

OECD Pacific: Consists of Australia, Japan, and New Zealand.

Organization for Petroleum Exporting Countries (OPEC) - Includes Saudi Arabia, Iran, Venezuela, Libya, Indonesia, United Arab Emirates, Algeria, Nigeria, Ecuador, Gabon, Iraq, Kuwait, and Qatar. Data for Saudi Arabia and Kuwait include their shares from the Partitioned Zone (formerly the Neutral Zone).

Arab OPEC - Consists of Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Other single-unit truck - See *Single-unit truck*.

Oxygenate - A substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. Includes fuel ethanol, methanol, and methyl tertiary butyl ether (MTBE).

Particulates - Carbon particles formed by partial oxidation and reduction of the hydrocarbon fuel. Also included are trace quantities of metal oxides and nitrides, originating from engine wear, component degradation, and inorganic fuel additives. In the transportation sector, particulates are emitted mainly from diesel engines.

Passenger-miles traveled (PMT) - One person traveling the distance of one mile. Total passenger-miles traveled, thus, give the total mileage traveled by all persons.

Passenger rail - See *Rail*, "*Amtrak*" and "*Transit Railroad*".

Persian Gulf countries: Consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Emirates.

Personal Consumption Expenditures (PCE) - As used in the national accounts, the market value of purchases of goods and services by individuals and nonprofit institutions and the value of food, clothing, housing, and financial services received by them as income in kind. It includes the rental value of owner-occupied houses but excludes purchases of dwellings, which are classified as capital goods (investment).

Personal income - See *Income*.

Petroleum - A generic term applied to oil and oil products in all forms, such as crude oil, lease condensate, unfinished oil, refined petroleum products, natural gas plant liquids, and non-hydrocarbon compounds blended into finished petroleum products.

Petroleum consumption: A calculated demand for petroleum products obtained by summing domestic production, imports of crude petroleum and natural gas liquids, imports

of petroleum products, and the primary stocks at the beginning of the period and then subtracting the exports and the primary stocks at the end of the period.

Petroleum exports: Shipments of petroleum products from the 50 States and the District of Columbia to foreign countries, Puerto Rico, the Virgin Islands, and other U.S. possessions and territories.

Petroleum imports: All imports of crude petroleum, natural gas liquids, and petroleum products from foreign countries and receipts from Guam, Puerto Rico, the Virgin Islands, and the Hawaiian Trade Zone. The commodities included are crude oil, unfinished oils, plant condensate, and refined petroleum products.

Petroleum inventories: The amounts of crude oil, unfinished oil, petroleum products, and natural gas liquids held at refineries, at natural gas processing plants, in pipelines, at bulk terminals operated by refining and pipeline companies, and at independent bulk terminals. Crude oil held in storage on leases is also included; these stocks are known as primary stocks. Secondary stocks - those held by jobbers, dealers, service station operators, and consumers - are excluded. Prior to 1975, stock held at independent bulk terminals were classified as secondary stocks.

Petroleum products supplied: For each petroleum product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Processing Gain - The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss - The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Proved Reserves of Crude Oil - The estimated quantities of all liquids defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Quad - Quadrillion, 10^{15} . In this publication, a Quad refers to Quadrillion Btu.

Rail -

Amtrak (American Railroad Tracks): Operated by the National Railroad Passenger Corporation of Washington, DC. This rail system was created by President Nixon in 1970, and was given the responsibility for the operation of intercity, as distinct from suburban, passenger trains between points designated by the Secretary of Transportation.

Class I freight railroad: Defined by the Interstate Commerce Commission each year based on annual operating revenue. A railroad is dropped from the Class I list if it fails to meet the annual earnings threshold for three consecutive years.

Commuter railroad: Those portions of mainline railroad (not electric railway) transportation operations which encompass urban passenger train service for local travel between a central city and adjacent suburbs. Commuter railroad service - using both locomotive-hauled and self-propelled railroad passenger cars - is characterized by multi-trip tickets, specific station-to-station fares, and usually only one or two stations in the central business district. Also known as suburban railroad.

Transit railroad: Includes "heavy" and "light" transit rail. **Heavy transit rail** is characterized by exclusive rights-of-way, multi-car trains, high speed rapid acceleration, sophisticated signaling, and high platform loading. Also known as subway, elevated railway, or metropolitan railway (metro). **Light transit rail** may be on exclusive or shared rights-of-way, high or low platform loading, multi-car trains or single cars, automated or manually operated. In generic usage, light rail includes streetcars, trolley cars, and tramways.

Residential sector - An energy consuming sector that consists of living quarters for private households. Excludes institutional living quarters.

Residential Transportation Energy Consumption Survey (RTECS) - This survey was designed by the Energy Information Administration of the Department of Energy to provide information on how energy is used by households for personal vehicles. It has been conducted five times since 1979, the most recent being 1991.

Residual fuel oil - The heavier oils that remain after the distillate fuel oils and lighter hydrocarbons are boiled off in refinery operations. Included are products known as ASTM grade numbers 5 and 6 oil, heavy diesel oil, Navy Special Fuel Oil, Bunker C oil, and acid sludge and pitch used as refinery fuels. Residual fuel oil is used for the production of electric power, for heating, and for various industrial purposes.

Rural - Usually refers to areas with population less than 5,000.

Sales period - October 1 of the previous year to September 30 of the given year. Approximately the same as a model year.

Sales-weighted miles per gallon (mpg) - Calculation of a composite vehicle fuel economy based on the distribution of vehicle sales.

Scrappage rate - As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that are retired from use (lacking registration) in a given year.

School and other nonrevenue bus - See *Bus*.

Single-unit truck - Includes two-axle, four-tire trucks and other single-unit trucks.

Two-axle, four-tire truck: A motor vehicle consisting primarily of a single motorized device with two axles and four tires.

Other single-unit truck: A motor vehicle consisting primarily of a single motorized device with more than two axles or more than four tires.

Special fuels - Consist primarily of diesel fuel with small amount of liquified petroleum gas, as defined by the Federal Highway Administration.

Specific acceleration power - Measured in watts per kilogram. Acceleration power divided by the battery system weight. Weight must include the total battery system.

Specific energy - Measured in watt hours per kilogram. The rated energy capacity of the battery divided by the total battery system weight.

Subcompact car - See *Automobile size classifications*.

Supplemental air carrier - See *Air carrier*.

Test weight - The weight setting at which a vehicle is tested on a dynamometer by the U.S. Environmental Protection Agency (EPA). This weight is determined by the EPA using the inertia weight of the vehicle.

Ton-mile - The movement of one ton of freight the distance of one mile. Ton-miles are computed by multiplying the weight in tons of each shipment transported by the distance hauled.

Transmission types -

- A3 - Automatic three speed
- A4 - Automatic four speed
- A5 - Automatic five speed
- L4 - Automatic lockup four speed
- M5 - Manual five speed

Transit bus - See *Bus*.

Transit railroad - See *Rail*.

Transportation sector - Consists of both private and public passenger and freight transportation, as well as government transportation, including military operations.

Truck Inventory and Use Survey (TIUS) - Survey designed to collect data on the characteristics and operational use of the nation's truck population. It is conducted every five years by the U.S. Bureau of the Census. Surveys were conducted in 1963, 1967, 1972, 1977, 1982, 1987, and 1992. For the 1997 survey, it was renamed the Vehicle Inventory and Use Survey in anticipation of including additional vehicle types. However, no additional vehicle types were added to the 1997 survey.

Trolley coach - See *Bus*.

Truck size classifications - U.S. Bureau of the Census has categorized trucks by gross vehicle weight (gvw) as follows:

- Light - Less than 10,000 pounds gvw (Also see *Light Truck*.)
- Medium - 10,001 to 20,000 pounds gvw
- Light-heavy - 20,001 to 26,000 pounds gvw
- Heavy-heavy - 26,001 pounds gvw or more.

Two-axle, four-tire truck - See *Single-unit truck*.

Two seater car - See *Automobile size classifications*.

Ultra-low emission vehicle - Any vehicle certified to the ultra-low emission standards which are set by the Federal government and/or the state of California.

Urban - Usually refers to areas with population of 5,000 or greater.

Variable operating cost - See *Operating cost*.

Vehicle Inventory and Use Survey - See Truck Inventory and Use Survey.

Vehicle-miles traveled (vmt) - One vehicle traveling the distance of one mile. Total vehicle miles, thus, is the total mileage traveled by all vehicles.

Zero-emission vehicle - Any vehicle certified to the zero emission standards which are set by the Federal government and/or the state of California. These standards apply to the vehicle emissions only.

TITLE INDEX

Acquisitions

Annual	
Average Annual Vehicle-Miles of Travel for Fleet Vehicles, 2000	10-4
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
Average Annual Miles per Household Vehicle by Vehicle Age	11-14
Average Annual Expenditures of Households by Income, 2000	11-4
Annual (continued)	

Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Automobile	
Automobile Operating Cost per Mile, 1985-2001	5-15
Fixed Automobile Operating Costs per Year, 1975-2001	5-16
Automobile Scrappage and Survival Rates	6-13
Automobile Survival Rates	6-14
Automobile Registrations for Selected Countries, 1950-2000	6-2
Average Material Consumption for a Domestic Automobile, 1978, 1985, and 2001	7-16
Automobile Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-19
New Retail Automobile Sales in the United States, 1970-2001	7-5
Automobiles	
Average Age of Automobiles and Trucks in Use, 1970-2000	6-11
Average Age and Registrations of Automobiles and Trucks, 1970-2000	6-12
Automobiles and Trucks in Use, 1970-2000	6-5
Automobiles in Operation and Vehicle Travel by Age, 1970 and 2000	6-9
Sales-Weighted Engine Size of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-11
Sales-Weighted Curb Weight of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-13
Sales-Weighted Interior Space of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-14
Sales-Weighted Wheelbase of New Automobiles and Light Trucks, Sales Periods 1976-2000	7-15
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Automobiles, Selected Sales Periods 1976-2001	7-7
Available	
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2002	9-5
Sales and Specifications of Available Advanced Technology Vehicles	9-8
Average	
Average Length of Time Business Fleet Vehicles are in Service, 2000	10-3
Average Annual Vehicle-Miles of Travel for Fleet Vehicles, 2000	10-4
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2000	10-5
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS	11-10
Average Vehicle Occupancy by Trip Purpose, 1977 and 1995 NPTS	11-11
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
Average Age of Vehicles by Household Vehicle Ownership, 1995 NPTS	11-13
Average Annual Miles per Household Vehicle by Vehicle Age	11-14
Average (continued)	

Average Annual Expenditures of Households by Income, 2000	11-4
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 and 1995 NPTS	11-9
Average Price of a New Car, 1970-2001	5-14
Average Age of Automobiles and Trucks in Use, 1970-2000	6-11
Average Age and Registrations of Automobiles and Trucks, 1970-2000	6-12
Average Material Consumption for a Domestic Automobile, 1978, 1985, and 2001	7-16
Automobile Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-19
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-20
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Aviation	
Summary Statistics for General Aviation, 1970-2000	12-3
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2001	5-9
Axle	
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2000	7-3
Barrel	
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2001	1-14
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2001	5-6
Bicycle	
Bicycle Sales, 1981-2000	11-18
Bike	
Walk and Bike Trips by Trip Purpose	11-19
Boating	
Recreational Boating Statistics, 1977-2000	12-7
Breakdown	
Breakdown of Domestic Marine Cargo by Commodity Class, 2000	12-6
Bus	
Energy Intensities for Selected Transit Bus Systems, 2000	2-18
Truck and Bus Registrations for Selected Countries, 1950-2000	6-3
Buses	
Summary Statistics on Transit Buses, 1984-2000	8-14
Summary Statistics on Intercity and School Buses, 1970-2000	8-15
Business	
Average Length of Time Business Fleet Vehicles are in Service, 2000	10-3

CAFE	
Automobile Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-19
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-20
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Calendar Vehicle Stock and New Sales in United States, 2000 Calendar Year	6-7
California	
California Passenger Cars and Light Trucks Emission Certification Standards	4-28
California Vehicle Emission Reduction for Passenger Cars and Light Trucks	4-29
Capita	
Vehicles per Thousand Capita: U.S. Compared to Other Countries	6-6
Car	
Average Price of a New Car, 1970-2001	5-14
Carbon	
World Carbon Emissions, 1990 and 1999	3-2
Numerical Estimates of Global Warming Potentials Compared With Carbon Dioxide	3-3
U.S. Carbon Dioxide Emissions from Fossil Energy Consumption by End-Use Sector, 1985-2000	3-5
U.S. Carbon Dioxide Emissions from Energy Use in the Transportation Sector, 1980-2000	3-6
Total National Emissions of Carbon Monoxide, 1970-99	4-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-99	4-4
Cargo	
Breakdown of Domestic Marine Cargo by Commodity Class, 2000	12-6
Carloads	
Railroad Revenue Carloads by Commodity Group, 1974 and 2000	12-10
Carriers	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2001	12-2
Cars	
Tier 2 Emission Standards for Cars and Light Trucks Effective for 2004-2009 Model 2004-2009 Model Years	4-19
California Passenger Cars and Light Trucks Emission Certification Standards	4-28
California Vehicle Emission Reduction for Passenger Cars and Light Trucks	4-29
Summary Statistics for Passenger Cars, 1970-2000	7-2
The Gas Guzzler Tax on New Cars	7-22
Census	
Means of Transportation to Work, 1980, 1990 and 2000 Census	11-16
Workers by Commute Time, 1990 and 2000 Census	11-17
Household Vehicle Ownership, 1960-2000 Census	11-5

Certificated	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2001	12-2
Certification	
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Vehicles	4-21
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT1)	4-22
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT2)	4-23
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT3)	4-24
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT4)	4-25
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Heavy Trucks	4-26
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Heavy Heavy Trucks	4-27
California Passenger Cars and Light Trucks Emission Certification Standards	4-28
Cities	
Clean Cities Coalitions	9-7
City	
New York City Driving Cycle	7-30
Class	
Breakdown of Domestic Marine Cargo by Commodity Class, 2000	12-6
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton Miles, 2000	12-8
Summary Statistics for Class I Freight Railroads, 1970-2000	12-9
Sales-Weighted Engine Size of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-11
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Sales Periods 1976-2001	7-12
Sales-Weighted Curb Weight of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-13
Sales-Weighted Interior Space of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-14
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	7-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999	7-4
Light Vehicle Market Shares by Size Class, Sales Periods 1976-2001	7-9
Truck Statistics by Gross Vehicle Weight Class, 1997	8-6
Truck Harmonic Mean Fuel Economy by Size Class, 1992 and 1997	8-6
Clean	
Clean Cities Coalitions	9-7

Clean Cities Coalitions	9-7

Collected	
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Commerce	
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2000	12-4
Summary Statistics for Domestic Waterborne Commerce, 1970-2000	12-5
Commodity	
Railroad Revenue Carloads by Commodity Group, 1974 and 2000	12-10
Breakdown of Domestic Marine Cargo by Commodity Class, 2000	12-6
Growth of Freight in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-12
Growth of Freight Miles in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-13
Commute	
Workers by Commute Time, 1990 and 2000 Census	11-17
Commuter	
Summary Statistics for Commuter Rail Operations, 1984-2000	12-13
Composition	
Light Vehicles in Fleets of 10 or More, 2000	10-3
Compounds	
Total National Emissions of Volatile Organic Compounds, 1970-99	4-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-99	4-8
Constant	
Crude Oil Prices in Current and Constant Terms, 1870-2000	1-8
Consumed	
Fuel Consumed by Federal Government Fleets, FY 1997-2000	10-7
Consumer	
Consumer Price Indices, 1970-2001	5-17
Consumption	
Petroleum Production and Consumption Ratios, 1950-2001	1-16
United States Petroleum and Consumption, 1950-2001	1-17
Consumption of Petroleum by End-Use Sector, 1973-2001	1-18
World Petroleum Consumption, 1960-2001	1-5
World Oil Reserves, Production and Consumption, 2001	1-6
World Consumption of Primary Energy, 2000	2-2
U. S. Consumption of Total Energy by End-Use Sector, 1973-2001	2-3
Distribution of Energy Consumption by Source, 1973 and 2001	2-4
Alternative Fuel and Oxygenate Consumption, 1992-2001	2-5
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2000	2-6
Highway Transportation Energy Consumption by Mode, 1970-2000	2-8
Nonhighway Transportation Energy Consumption by Mode, 1970-2000	2-9

Consumption (continued)	
U.S. Carbon Dioxide Emissions from Fossil Energy	
Consumption by End-Use Sector, 1985-2000	3-5
Average Material Consumption for a Domestic Automobile, 1978,	
1985, and 2001	7-16
Conventional	
Conventional and Alternative Fuel Refueling Stations	7-18
Corporate	
Automobile Corporate Average Fuel Economy (CAFE) Standards	
versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-19
Light Truck Corporate Average Fuel Economy (CAFE) Standards	
versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-20
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Corporation	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak),	
1971-2000	12-12
Cost	
Automobile Operating Cost per Mile, 1985-2001	5-15
Costs	
Fixed Automobile Operating Costs per Year, 1975-2001	5-16
Countries	
Petroleum Stocks of OECD Countries by Ownership, 1995-2001	1-7
Gasoline Prices for Selected Countries, 1978-2001	5-2
Gasoline Prices for Selected Countries, 1990 and 2001	5-3
Diesel Fuel Prices for Selected Countries, 1978-2001	5-4
Diesel Prices for Selected Countries, 1990 and 2001	5-5
Automobile Registrations for Selected Countries, 1950-2000	6-2
Truck and Bus Registrations for Selected Countries, 1950-2000	6-3
Vehicles per Thousand Capita: U.S. Compared to Other Countries	6-6

Federal

Average Miles per Domestic Federal Vehicle by Vehicle Type, 2000	10-5
Federal Government Vehicles by Agency, Fiscal Year 2000	10-6
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 1997-2000	10-7
Fuel Consumed by Federal Government Fleets, FY 1997-2000	10-6
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Vehicles	4-21
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT1)	4-22
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT2)	4-23
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT3)	4-24
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT4)	4-25
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Heavy Trucks	4-26
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Heavy Heavy Trucks	4-27
Federal Excise Taxes on Motor Fuels	5-12

Fines

	Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Fiscal	Federal Government Vehicles by Agency, Fiscal Year 2000	10-6
Fixed	Fixed Automobile Operating Costs per Year, 1975-2001	5-16
Fleet	Fleet Vehicles in Service as of February 1, 2001	10-2
	Light Vehicles in Fleets of 10 or More, 2000	10-3
	New Light Fleet Vehicle Purchases by Vehicle Type, 2000	10-3
	Average Length of Time Business Fleet Vehicles are in Service, 2000	10-4
	Average Annual Vehicle-Miles of Travel for Fleet Vehicles, 2000	10-4
	Federal Fleet Vehicle Acquisitions by Fuel Type, FY 1997-2000	10-7
	Percentage of Trucks by Fleet Size and Primary Fueling Facility, 1997	8-9
Fleets	Light Vehicles in Fleets of 10 or More, 2000	10-3
	Fuel Consumed by Federal Government Fleets, FY 1997-2000	10-7
Flow	Growth of Freight in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys Growth of Freight Miles in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-13
Fossil	World Fossil Fuel Potential	1-2
	U.S. Carbon Dioxide Emissions from Fossil Energy Consumption by End-Use Sector, 1985-2000	3-5
Freight	Class I Railroad Freight Systems in the United States Ranked by Revenue Ton Miles, 2000	12-8
	Summary Statistics for Class I Freight Railroads, 1970-2000	12-9
	Intercity Freight Movement and Energy Use in the United States, 2000	2-19
	Energy Intensities of Freight Modes, 1970-2000	2-20
	Growth of Freight in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-12
	Growth of Freight Miles in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-13
Fuel	World Fossil Fuel Potential	1-2
	Federal Fleet Vehicle Acquisitions by Fuel Type, FY 1997-2000	10-7
	Fuel Consumed by Federal Government Fleets, FY 1997-2000	10-7
	Energy Policy Act Purchase Requirements of Light Alternative Fuel Vehicles	10-8
	U.S. Production and Imports of MTBE and Fuel Ethanol, 1985-2001	2-13
	Alternative Fuel and Oxygenate Consumption, 1992-2001	2-5
	Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2000	2-6

Fuel (continued)

Fuel-Cycle Energy and Greenhouse Gas Emission Changes of Alternative and Advanced Vehicle/Fuel Systems	3-9
Fuel-Cycle Energy and Criteria Pollutant Emission Changes of Alternative and Advanced Vehicle/Fuel Systems	4-16
Diesel Fuel Prices for Selected Countries, 1978-2001	5-4
Retail Prices for Motor Fuel, 1978-2001	5-7
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2001	5-9
Conventional and Alternative Fuel Refueling Stations	7-18
Automobile Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-19
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-20
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2000	7-21
Fuel Economy by Speed, 1973, 1984 and 1997	7-26
Fuel Economy by Speed, 1973, 1984 and 1997	7-27
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study	7-28
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles	7-32
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Automobiles, Selected Sales Periods 1976-2001	7-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Selected Sales Periods 1976-2001	7-8
Truck Harmonic Mean Fuel Economy by Size Class, 1992 and 1997	8-6
Estimates of Alternative Fuel Vehicles in Use, 1992-2001	9-3
Estimates of Alternative Fuel Vehicles by Ownership, 1996 and 2001	9-4
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2002	9-5
Number of Alternative Refuel Sites by State and Fuel Type, 2001	9-6
Fueling	
Percentage of Trucks by Major Use and Primary Fueling Facility, 1997	8-10
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 1997	8-9
Fuels	
Highway Usage of Gasoline and Special Fuels, 1973-2000	2-11
State Taxes on Motor Fuels, 2000	5-10
Federal Excise Taxes on Motor Fuels	5-12
Gallon	
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2001	5-6
Gas	
Fuel-Cycle Energy and Greenhouse Gas Emission Changes of Alternative and Advanced Vehicle/Fuel Systems	3-9
The Gas Guzzler Tax on New Cars	7-22
Tax Receipts from the Sale of Gas Guzzlers, 1980-2000	7-23
Gases	
Estimated U.S. Emissions of Greenhouse Gases, 1990-2000	3-4
Gasohol	
State Tax Exemptions for Gasohol, October 2001	5-12

Gasoline	
Off-Highway Use of Gasoline and Diesel, 1985-2000	2-10
Highway Usage of Gasoline and Special Fuels, 1973-2000	2-11
Motor Gasoline Quantities by Type, 1981 and 2001	2-12
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Vehicles	4-21
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT1)	4-22
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT2)	4-23
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT3)	4-24
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT4)	4-25
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Heavy Trucks	4-26
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Heavy Heavy Trucks	4-27
Gasoline Prices for Selected Countries, 1978-2001	5-2
Gasoline Prices for Selected Countries, 1990 and 2001	5-3
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2001	5-6
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2001	5-9
Global	
Numerical Estimates of Global Warming Potentials Compared With Carbon Dioxide	3-3
Government	
Federal Government Vehicles by Agency, Fiscal Year 2000	10-6
Fuel Consumed by Federal Government Fleets, FY 1997-2000	10-7
Greenhouse	
Estimated U.S. Emissions of Greenhouse Gases, 1990-2000	3-4
Fuel-Cycle Energy and Greenhouse Gas Emission Changes of Alternative and Advanced Vehicle/Fuel Systems	3-9
Gross	
Refinery Gross Output by World Region, 2001	1-12
New Retail Truck Sales by Gross Vehicle Weight, 1970-2001	8-4
Truck Statistics by Gross Vehicle Weight Class, 1997	8-6
Growth	
Oil Price and Economic Growth, 1970-2001	1-10
Growth of Freight in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-12
Growth of Freight Miles in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-13
Guzzler	
The Gas Guzzler Tax on New Cars	7-22
Guzzlers	

	Tax Receipts from the Sale of Gas Guzzlers, 1980-2000	7-23
GVW	New Retail Sales of Trucks 10,000 pounds GVW and Less in the United States, 1970-2001	7-6
Harmonic	Truck Harmonic Mean Fuel Economy by Size Class, 1992 and 1997	8-6
Heavy	Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Heavy Trucks	4-26
	Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Heavy Heavy Trucks	4-27
	Heavy Truck Scrappage and Survival Rates	6-17
	Heavy Truck Survival Rates	6-18
Highway	Off-Highway Use of Gasoline and Diesel, 1985-2000	2-10
	Highway Usage of Gasoline and Special Fuels, 1973-2000	2-11
	Energy Intensities of Highway Passenger Modes, 1970-2000	2-15
	Highway Transportation Energy Consumption by Mode, 1970-2000	2-8
	Emissions of Particulate Matter (PM 10) from Highway Vehicles, 1970-99	4-10
	Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-99	4-12
	Emissions of Carbon Monoxide from Highway Vehicles, 1970-99	4-4
	Emissions of Nitrogen Oxides from Highway Vehicles, 1970-99	4-6
	Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-99	4-8
	Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2000	6-8
	Highway Driving Cycle	7-29
Household	Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
	Average Age of Vehicles by Household Vehicle Ownership, 1995 NPTS	11-13
	Average Annual Miles per Household Vehicle by Vehicle Age	11-14
	Shares of Long-Distance Person Trips by Mode and Household Income, 1995	11-22
	Household Vehicle Ownership, 1960-2000 Census	11-5
	Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
	Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
	Average Number of Vehicles and Vehicle Travel per Household, 1990 and 1995 NPTS	11-9
Households	Average Annual Expenditures of Households by Income, 2000	11-4
Import	Sales-Weighted Engine Size of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-11
	Sales-Weighted Engine Size of New Domestic and Import Light Trucks	

by Size Class, Sales Periods 1976-2001	7-12
Sales-Weighted Curb Weight of New Domestic and Import Automobiles	
by Size Class, Sales Periods 1976-2001	7-13
Sales-Weighted Interior Space of New Domestic and Import Automobiles	
by Size Class, Sales Periods 1976-2001	7-14
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of	
New Domestic and Import Automobiles, Selected Sales Periods 1976-2001	7-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of	
New Domestic and Import Light Trucks, Selected Sales Periods 1976-2001	7-8
Imports	
United States Petroleum Production, Imports and Exports, 1950-2001	1-15
U.S. Petroleum Imports by World Region of Origin, 1960-2001	1-9
U.S. Production and Imports of MTBE and Fuel Ethanol, 1985-2001	2-13
Incentives	
States With Ethanol Tax Incentives	5-13
Income	
Shares of Long-Distance Person Trips by Mode and Household Income, 1995	11-22
Average Annual Expenditures of Households by Income, 2000	11-4
Indicators	
Economic Indicators, 1970-2001	5-17
Indices	
Consumer Price Indices, 1970-2001	5-17
Industries	
Employees of Motor Vehicle and Related Industries, 1999	5-19
Employment in Transportation and Related Industries, 1960-99	5-20
Input	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2001	1-13
Intensities	
Energy Intensities of Highway Passenger Modes, 1970-2000	2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2000	2-16
Energy Intensities for Transit Rail, 2000	2-17
Energy Intensities for Selected Transit Bus Systems, 2000	2-18
Energy Intensities of Freight Modes, 1970-2000	2-20
Intercity	
Intercity Freight Movement and Energy Use in the United States, 2000	2-19
Summary Statistics on Intercity and School Buses, 1970-2000	8-15
Interior	
Sales-Weighted Interior Space of New Domestic and Import Automobiles	
by Size Class, Sales Periods 1976-2001	7-14
Intermodal	
Intermodal Rail Traffic, 1965-2000	12-11
International	
Summary Statistics for U.S. Domestic and International Certificated Route	
Air Carriers (Combined Totals), 1970-2001	12-2

Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2000	12-4
Japanese	
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles	7-32
Comparison of U.S., European, and Japanese Driving Cycles	7-33
Jet	
Refiner Sales Prices for Aviation Gasoline and Jet Driving 1978-2001	5-9
Journey	
Journey-to-Work Statistics, 1983, 1990, and 1995 NPTS	11-15
Lead	
National Lead Emission Estimates, 1970-99	4-13
Length	
Average Length of Time Business Fleet Vehicles are in Service	10-4
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Light	
Light Vehicles in Fleets of 10 or More, 2000	10-3
New Light Fleet Vehicle Purchases by Vehicle Type, 2000	10-3
Energy Policy Act Purchase Requirements of Light Alternative Fuel Vehicles	10-8
Tier 2 Emission Standards for Cars and Light Trucks Effective for 2004-2009 Model 2004-2009 Model Years	4-19
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards Standards are Final	4-20
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Vehicles	4-21
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT1)	4-22
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT2)	4-23
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT3)	4-24
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Trucks (Category LDT4)	4-25
Federal Exhaust Emission Certification Standards for Gasoline- and Diesel-Powered Light Heavy Trucks	4-26
California Passenger Cars and Light Trucks Emission Certification Standards	4-28
California Vehicle Emission Reduction for Passenger Cars and Light Trucks	4-29
Light (continued)	
Light Truck Scrappage and Survival Rates	6-15
Light Truck Survival Rates	6-16
Light Vehicle Market Shares, Sales Periods 1976-2001	7-10
Sales-Weighted Engine Size of New Domestic and Import Light Trucks	

by Size Class, Sales Periods 1976-2001	7-12
Sales-Weighted Wheelbase of New Automobiles and Light Trucks, Sales Periods 1976-2000	7-15
New Light Vehicle Dealerships and Sales, 1970-2000	7-17
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2002	7-20
Light Vehicle Occupant Safety Data, 1975-2000	7-35
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	7-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999	7-4
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Selected Sales Periods 1976-2001	7-8
Light Vehicle Market Shares by Size Class, Sales Periods 1976-2001	7-9
Manufacturer	
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2002	9-5
Manufacturing	
Motor Vehicle Manufacturing Employment Statistics, 1970-99	5-18
Marine	
Breakdown of Domestic Marine Cargo by Commodity Class, 2000	12-6
Market	
Light Vehicle Market Shares, Sales Periods 1976-2001	7-10
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Automobiles, Selected Sales Periods 1976-2001	7-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Selected Sales Periods 1976-2001	7-8
Light Vehicle Market Shares by Size Class, Sales Periods 1976-2001	7-9
Material	
Average Material Consumption for a Domestic Automobile, 1978, 1985, and 2001	7-16
Matter	
Emissions of Particulate Matter (PM 10) from Highway Vehicles, 1970-99	4-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-99	4-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-99	4-12
Total National Emissions of Particulate Matter (PM 10), 1970-99	4-9
Mean	
Truck Harmonic Mean Fuel Economy by Size Class, 1992 and 1997	8-6
Middle	
Summary of 1996 Military Expenditures for Defending Oil Supplies from the Middle East	1-11
Mile	
Automobile Operating Cost per Mile, 1985-2001	5-15
Miles	
Ton-Miles of Petroleum and Petroleum Products in the U.S. by Mode, 1975-2000 ..	1-19
Average Annual Vehicle-Miles of Travel for Fleet Vehicles, 2000	10-4
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2000	10-5

Vehicle-Miles by Trip Purpose, 1995 NPTS	11-12
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
Average Annual Miles per Household Vehicle by Vehicle Age	11-14
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton Miles, 2000	12-8
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2000	6-8
Growth of Freight Miles in the United States: Comparison of the 1997 and 1993 Commodity Flow Surveys	8-13
Military	
Summary of 1996 Military Expenditures for Defending Oil Supplies from the Middle East	1-11
Mode	
Ton-Miles of Petroleum and Petroleum Products in the U.S. by Mode, 1975-2000 ..	1-19
Long-Distance Trips by Mode and Purpose, 1995	11-21
Shares of Long-Distance Person Trips by Mode and Household Income, 1995	11-22
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2000	2-6
Transportation Energy Use by Mode, 1999-2000	2-7
Highway Transportation Energy Consumption by Mode, 1970-2000	2-8
Nonhighway Transportation Energy Consumption by Mode, 1970-2000	2-9
Model	
Tier 2 Emission Standards for Cars and Light Trucks Effective for 2004-2009 Model 2004-2009 Model Years	4-19
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2002	9-5
Modes	
Energy Intensities of Highway Passenger Modes, 1970-2000	2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2000	2-16
Energy Intensities of Freight Modes, 1970-2000	2-20
Monoxide	
Total National Emissions of Carbon Monoxide, 1970-99	4-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-99	4-4
Motor	
Motor Gasoline Quantities by Type, 1981 and 2001	2-12
State Taxes on Motor Fuels, 2000	5-10
Motor (continued)	
Federal Excise Taxes on Motor Fuels	5-12
Motor Vehicle Manufacturing Employment Statistics, 1970-99	5-18
Employees of Motor Vehicle and Related Industries, 1999	5-19
Retail Prices for Motor Fuel, 1978-2001	5-7
Movement	

Intercity Freight Movement and Energy Use in the United States, 2000	2-19
MTBE	
U.S. Production and Imports of MTBE and Fuel Ethanol, 1985-2001	2-13
National	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2000	12-12
Total National Emissions of Particulate Matter (PM-2.5), 1990-99	4-11
National Lead Emission Estimates, 1970-99	4-13
Total National Emissions of the Criteria Air Pollutants by Sector, 1999	4-2
Total National Emissions of Carbon Monoxide, 1970-99	4-3
Total National Emissions of Nitrogen Oxides, 1970-99	4-5
Total National Emissions of Volatile Organic Compounds, 1970-99	4-7
Total National Emissions of Particulate Matter (PM 10), 1970-99	4-9
Nitrogen	
Total National Emissions of Nitrogen Oxides, 1970-99	4-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-99	4-6
Nonhighway	
Energy Intensities of Nonhighway Passenger Modes, 1970-2000	2-16
Nonhighway Transportation Energy Consumption by Mode, 1970-2000	2-9
Nonoccupant	
Occupant Fatalities by Vehicle Type and Nonoccupant Fatalities, 1975-2000	7-34
NPTS	
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS	11-10
Average Vehicle Occupancy by Trip Purpose, 1977 and 1995 NPTS	11-11
Vehicle-Miles by Trip Purpose, 1995 NPTS	11-12
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
Average Age of Vehicles by Household Vehicle Ownership, 1995 NPTS	11-13
Journey-to-Work Statistics, 1983, 1990, and 1995 NPTS	11-15
Demographic Statistics, 1969, 1977, 1983, 1990, and 1995 NPTS	11-6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, and 1995 NPTS	11-7
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 and 1995 NPTS	11-9
Numerical	
Numerical Estimates of Global Warming Potentials Compared With Carbon Dioxide	3-3
Occupancy	
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS	11-10
Average Vehicle Occupancy by Trip Purpose, 1977 and 1995 NPTS	11-11
Occupant	

Occupant Fatalities by Vehicle Type and Nonoccupant Fatalities, 1975-2000	7-34
Light Vehicle Occupant Safety Data, 1975-2000	7-35
October	
State Tax Exemptions for Gasohol, October 2001	5-12
OECD	
Petroleum Stocks of OECD Countries by Ownership, 1995-2001	1-7
Oil	
Oil Price and Economic Growth, 1970-2001	1-10
Summary of 1996 Military Expenditures for Defending Oil Supplies from the Middle East	1-11
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2001	1-13
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2001	1-14
World Crude Oil Production, 1960-2001	1-3
World Oil Reserves, Production and Consumption, 2001	1-6
Crude Oil Prices in Current and Constant Terms, 1870-2000	1-8
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2001	5-6
Operating	
Automobile Operating Cost per Mile, 1985-2001	5-15
Fixed Automobile Operating Costs per Year, 1975-2001	5-16
Operation	
Trucks in Operation and Vehicle Travel by Age, 1970 and 2000	6-10
Automobiles in Operation and Vehicle Travel by Age, 1970 and 2000	6-9
Operations	
Summary Statistics for Commuter Rail Operations, 1984-2000	12-13
Summary Statistics for Rail Transit Operations, 1970-2000	12-14
Organic	
Total National Emissions of Volatile Organic Compounds, 1970-99	4-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-99	4-8
Origin	
U.S. Petroleum Imports by World Region of Origin, 1960-2001	1-9
Output	
Refinery Gross Output by World Region, 2001	1-12
Ownership	
Petroleum Stocks of OECD Countries by Ownership, 1995-2001	1-7
Average Annual Miles per Vehicle by Household Vehicle Ownership, 1995 NPTS	11-13
Average Age of Vehicles by Household Vehicle Ownership, 1995 NPTS	11-13
Ownership (continued)	
Household Vehicle Ownership, 1960-2000 Census	11-5
Estimates of Alternative Fuel Vehicles by Ownership, 1996 and 2001	9-4
Oxides	
Total National Emissions of Nitrogen Oxides, 1970-99	4-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-99	4-6
Oxygenate	

Alternative Fuel and Oxygenate Consumption, 1992-2001	2-5
Particulate	
Emissions of Particulate Matter (PM 10) from Highway Vehicles, 1970-99	4-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-99	4-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-99	4-12
Total National Emissions of Particulate Matter (PM 10), 1970-99	4-9
Passenger	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2000	12-12
Passenger Travel and Energy Use, 2000	2-14
Energy Intensities of Highway Passenger Modes, 1970-2000	2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2000	2-16
California Passenger Cars and Light Trucks Emission Certification Standards	4-28
California Vehicle Emission Reduction for Passenger Cars and Light Trucks	4-29
Summary Statistics for Passenger Cars, 1970-2000	7-2
Percentage	
Percentage of Trucks by Major Use and Primary Fueling Facility, 1997	8-10
Percentage of Trucks by Size Ranked by Major Use, 1997	8-8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 1997	8-9
Periods	
Light Vehicle Market Shares, Sales Periods 1976-2001	7-10
Sales-Weighted Engine Size of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-11
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Sales Periods 1976-2001	7-12
Sales-Weighted Curb Weight of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-13
Sales-Weighted Interior Space of New Domestic and Import Automobiles by Size Class, Sales Periods 1976-2001	7-14
Sales-Weighted Wheelbase of New Automobiles and Light Trucks, Sales Periods 1976-2000	7-15
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Automobiles, Selected Sales Periods 1976-2001	7-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Selected Sales Periods 1976-2001	7-8
Light Vehicle Market Shares by Size Class, Sales Periods 1976-2001	7-9
Person	
Shares of Long-Distance Person Trips by Mode and Household Income, 1995	11-22
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Petroleum	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2001	1-13
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2001	1-14
United States Petroleum Production, Imports and Exports, 1950-2001	1-15
Petroleum Production and Consumption Ratios, 1950-2001	1-16

United States Petroleum and Consumption, 1950-2001	1-17
Consumption of Petroleum by End-Use Sector, 1973-2001	1-18
Ton-Miles of Petroleum and Petroleum Products in the U.S. by Mode, 1975-2000 ..	1-19
World Petroleum Production, 1973-2001	1-4
World Petroleum Consumption, 1960-2001	1-5
Petroleum Stocks of OECD Countries by Ownership, 1995-2001	1-7
U.S. Petroleum Imports by World Region of Origin, 1960-2001	1-9
PM	
Emissions of Particulate Matter (PM 10) from Highway Vehicles, 1970-99	4-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-99	4-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-99	4-12
Total National Emissions of Particulate Matter (PM 10), 1970-99	4-9
PMT	
Average Annual Person-Miles Traveled (PMT), Person Trips and Trip Length per Household by Selected Trip Purposes, 1983, 1990, and 1995 NPTS	11-8
Policy	
Energy Policy Act Purchase Requirements of Light Alternative Fuel Vehicles	10-8
Pollutant	
Fuel-Cycle Energy and Criteria Pollutant Emission Changes of Alternative and Advanced Vehicle/Fuel Systems	4-16
Pollutants	
Total National Emissions of the Criteria Air Pollutants by Sector, 1999	4-2
Population	
Population and Vehicle Profile, 1950-2000	11-2
Population and Vehicle Ratios, 1950-2000	11-3
Potential	
World Fossil Fuel Potential	1-2
Potentials	
Numerical Estimates of Global Warming Potentials Compared With Carbon Dioxide	3-3
Pounds	
New Retail Sales of Trucks 10,000 pounds GVW and Less in the United States, 1970-2001	7-6
